Introduction

This document is intended to offer advice to recipients of funds from the U.S. Department of Energy's (DOE's) Water Power Technologies Office (WPTO) for organizing and storing data prior to submission to the Marine and Hydrokinetic Data Repository (MHKDR) for the purposes of simplifying the data submission process and maximizing data accessibility, usability, and longevity. This document also provides detailed information about the MHKDR data submission process, including what data to submit, what metadata to include and where, and what happens to data following submission. Please also see the [MHKDR submission training videos](#) available online.

Data Management and Sharing Best Practices

Managing data properly requires a comprehensive strategy outlined at the beginning of the project lifecycle. Early strategic decisions on file organization, naming conventions, and metadata collection can not only streamline data sharing and eventual dissemination, they can also help improve data access for project team members and increase the overall efficiency of the project as a whole.

Metadata Collection

It's important to collect all relevant metadata as part of data being collected in preparation for eventual dissemination. Properly documenting metadata while the details are still fresh in the minds of researchers helps to avoid loss of this information and streamlines the data submission process. Researchers should document as much metadata as possible, including, but not limited to:

- where the data were collected (including maps of sample locations),
- resolution of the data, units, and any assumptions,
- survey spacing and timing,
- any problems encountered where data were lost or recorded improperly,
- anomalies or significant events (e.g. equipment malfunction),
- specific methods used to create the data, and
- any filtering or down-sampling methods applied to the data

File Organization

Proper file organization is critical in allowing intuitive access to data by others. When files are disorganized, public usability of data is reduced. When storing data with the intention of uploading it to the MHKDR, it is generally best to upload files individually; however, groups of files that can only be used together, such as shapefiles, should be grouped together in archives. In addition, if you are uploading an overwhelming number of files related to the same dataset, it may be intuitive to store them in a directory rather than uploading them individually. When storing files in directories, they should be structured in an intuitive way, with readme files and data dictionaries to provide supplemental information where needed. During the data submission process, you will be asked to provide a unique description of each resource uploaded. A good rule of thumb is, if you cannot think of a unique quality to distinguish one data file from another, then they are suitable for combination in an archive. Any files that are describable or usable individually, should probably be uploaded as independent resources.

File Naming Conventions

File naming is also essential for ease of access to data by others. Files should be named using a consistent, concise, and meaningful naming convention. If naming conventions could be considered unclear to those outside of the project, either explain the naming convention or create a data dictionary. When naming files, please be mindful of potential future iterations on data, results, and even measurements. Consider the use of vintage and version information in the file name. For example, data collected in 2020 may undergo a revision in 2021 (or subsequent years) to address a recording anomaly, which would ideally result in a file named “data-2020-v2” or “data-2020-revised-2021”.

File Formatting

Preferred formats are those that support the best reusability (e.g. non-proprietary formats); however, the MHKDR accepts a variety of file formats and will, in most cases, accept your submission in whatever format you wish to provide it. For data available in multiple formats, please consider the following guideline when choosing which format to submit. The tiers in Figure 1 are arranged in order of increasing inherent reusability.

Figure 1: The three tiers of data

Data Pipelines and Standards

Tier 3 data delivery is the preferred scheme, but because of the additional effort required to edit and review datasets for Tier 3 delivery, data standards and data pipelines are being created for non-tabular data and other datasets that are best represented in formats other than spreadsheets and/or XML. Such data include but are not limited to geospatial data, video files, audio files, Distributed Acoustic Sensing (DAS) data, picture libraries, 3D models, programs, code, and timeseries data or other data streams.

Geospatial Data

The preferred format for geospatial datasets is a shapefile. Be sure to upload all files necessary to use the shapefile, including the main file (.shp), the index file (.shx), and the dBASE file (.dbf). Include any optional files as well, such as the projection file (.prj), extensible markup language file (.xml), spatial index file (.sbn and .sbx), and code page file (.cpg). Make sure that geographic projection system is included either as a .prj file or in the submission’s text. The more metadata you include, the more useful the data will be for the next user. All shapefile components should be archived together into a single file before upload, as many of the components are useless without the others (e.g. “GIS data shapefile.zip”).

GIS software such as Quantum GIS, ESRI ArcMap, and MapInfo all define application-specific project file types that record information about structure, organization, and portrayal of

workspace content in a single bundle. These GIS workspace packages are often preferred over shapefiles when the structure, organization, and portrayal of workspace content is important for understanding the data.

Large Datasets

The MHKDR does not have any limits on file size nor number of files per submission. However, larger files may be difficult to upload over some internet connections, especially shared connections. If you have concerns about your file size or are having trouble uploading a large file, please contact us.

As a general rule, datasets on the order of 10 TB or more may be good candidates for submission to the Open Energy Data Initiative (OEDI) Data Lake. The OEDI Data Lake is a centralized repository of high-value DOE-funded research datasets that has been integrated with the MHKDR. Figure 2 shows the OEDI Data Lake concept. Data stored in the lake is actionable and discoverable, increasing accessibility to large and complex datasets (Brodt-Giles and Rossol 2019). In this concept, data that are too large to conveniently be downloaded via conventional means are made accessible in formats that support cloud-based high-performance computation and parallelization, allowing potential users of the data unrestricted access to massive datasets without the need for high bandwidth connections or high-performance computation solutions.

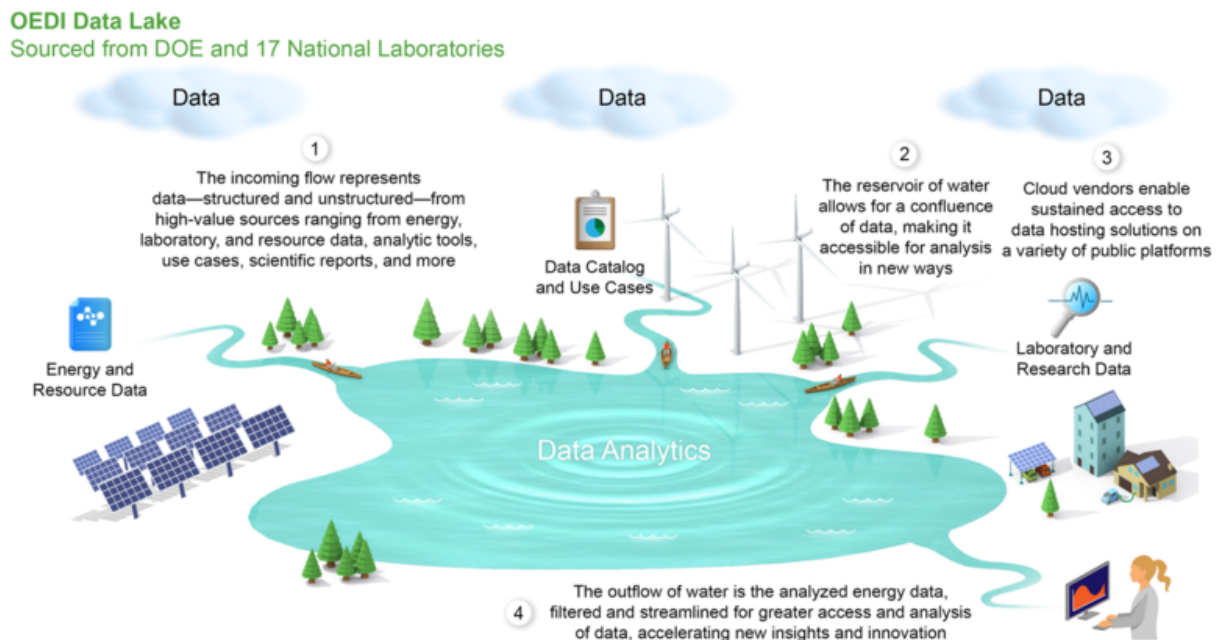

Figure 2: Diagram showing the OEDI Data Lake concept.

3D Models

Various software packages are in use to generate 3D models, but standard interchange formats for models have not been adopted. The National Archives indicates several 'preferred' or 'acceptable' formats for Computer Aided Design (CAD) vector graphics that are likely to be suitable. The degree of adoption and support for these formats by modeling software vendors is not known. In the near term, the recommended course of action is to:

1. Upload models in the file format native to the software in use.
2. Upload a copy of the model in an export/interchange format if any such format is available in the software package.
3. A viewable and manipulable version of the model should be uploaded if there is an easily accessible, free software package (with a link or description of how to access it) that can be used to view the model. This may utilize the format from items 1 or 2 above or be another format.
4. Metadata for model should contain references/links to each dataset included in the model along with description of how the data subset was selected (if applicable). The details of the file format versions and software necessary to use the files should be clearly documented.
5. High resolution (300 dpi) images should be included as well, providing visualization of the model from useful perspectives.

File Storage

It is important to choose a proper solution for file storage early on to avoid complications and confusion later. All files should be stored in an organized, secure, collaborative location to avoid data loss, simplify the process of submitting the data to the MHKDR, and to allow a convenient file sharing solution for teams.

While storing datasets on hard drives may seem like a viable solution, it is important to consider drive storage capacity, limits on the number of files, and hard drive failure rates (on average around 1.27%) (Weers and Huggins 2019). Cloud-based solutions such as the MHKDR and Data Foundry do not have these limits, and therefore provide more robust and reliable long-term file storage solutions.

Effective cloud storage requires high-speed connections to the cloud, which may not be possible in the field. This can require creative storage solutions both out in the field and back at the lab, or wherever data analyses, visualization or modeling activities are taking place. For collaborative projects or larger organizations, these could be distributed among multiple partners creating a need not only for multiple storage solutions, but also for an efficient transport mechanism capable of moving large amounts of data (Weers and Huggins 2019)

Data Foundry

The Data Foundry is one example of a file storage solution for DOE-funded research that is hosted by OpenEI, which provides access to open energy information, data and resources. The Data Foundry provides secure, cloud-based storage and universal access to digital information, enabling the greater scientific community to collaborate seamlessly with government agencies, national labs, universities and private organizations. The Data Foundry includes a user-friendly file management interface that allows authorized users access to project data. It allows the creation of teams for organizing groups of people who may require access to multiple projects. The Data Foundry has been integrated with the MHKDR to allow automatic data transfer and simplified data submission (Weers and Huggins 2020). Figures 3 and 4 show the “Send to MHKDR” functionality. If you have a project that you’d like linked to Foundry so that you can utilize this feature, contact [MHKDR Help](#).

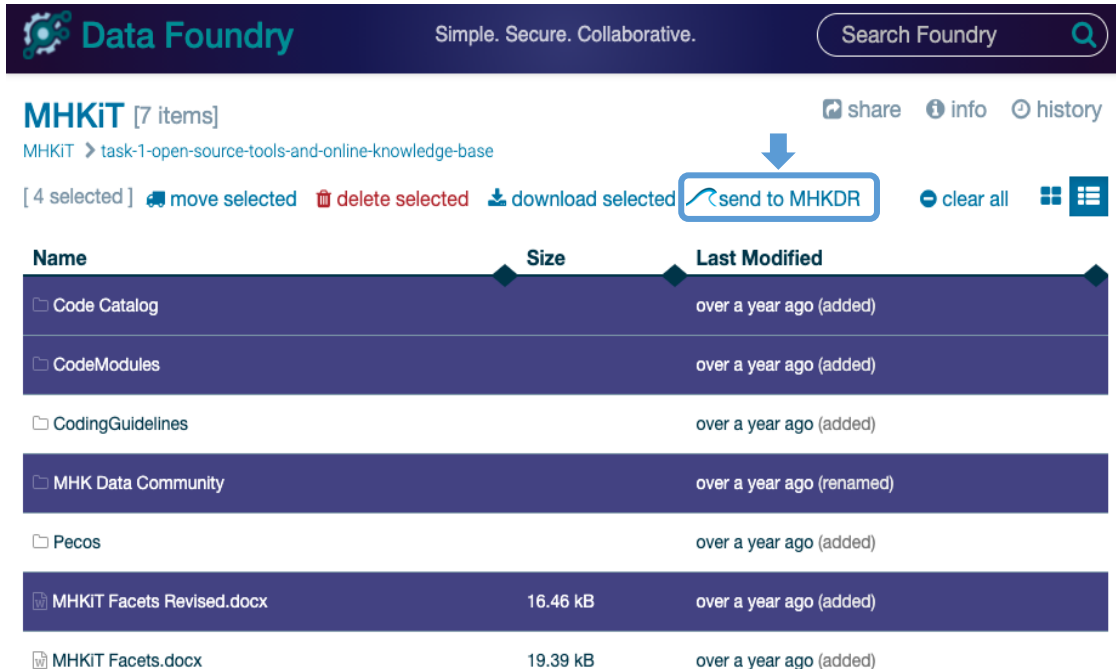

Figure 3: Screenshot showing the location of “Send to MHKDR” button

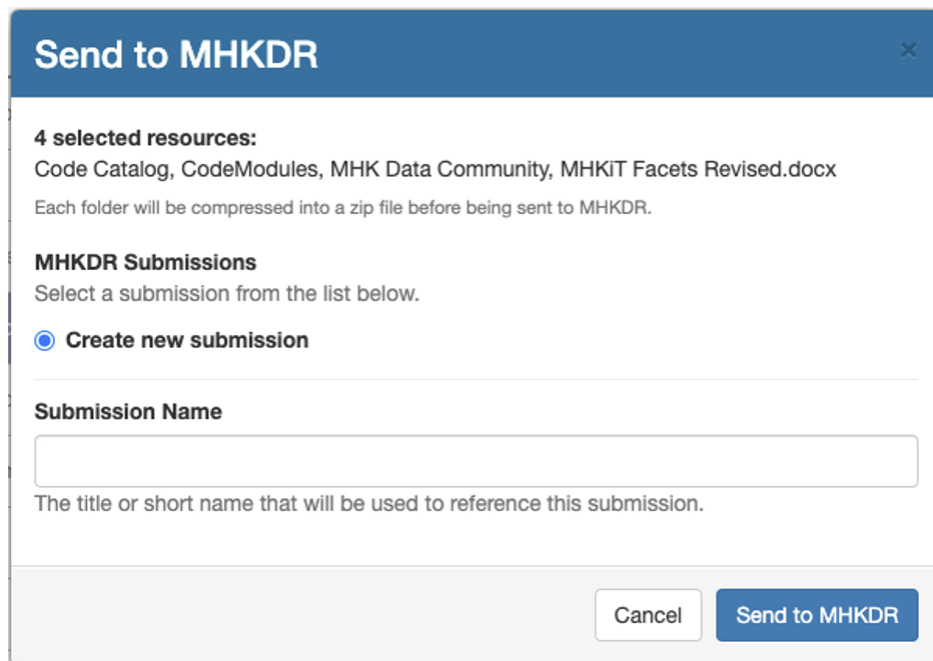

Figure 4: Depiction of “Send to MHKDR” functionality

MHKDR Submission Best Practices

What to Submit to MHKDR

The DOE Marine and Hydrokinetics Data Repository (MHKDR) was established to receive, manage and make available all marine and hydrokinetic energy-relevant data generated from projects funded by the DOE Water Power Technologies Office (WPTO). Links to conference

papers, journal articles, and/or final technical reports are useful to include to provide more detailed supporting information.

Certain data types and formats are better suited for reuse than others. Submitters to the MHKDR are encouraged to provide access to raw data along with the summarized, final data products typically associated with their project. This is because summary data is intrinsically biased towards a specific result, while raw data is unbiased and can be used in new, unforeseen ways.

What Not to Submit to MHKDR

Any personally identifiable information, business proprietary information, or copyrighted material should NOT be submitted to the MHKDR.

Personally Identifiable Information (PII) is any piece of information or combination of pieces that could be used to compromise the identity of an individual. A person's name alone is not considered PII, especially in the case of attribution. Contact information, such as email and home addresses, should not appear in any submitted data. A submitter's contact information is required but will only be used for questions about the data submission. Contact information for organizations is ok, including office email, the office address, coordinates, and phone and fax numbers. Personal information, such as home telephone numbers, email and home addresses, and birth dates is not allowed. Furthermore, private information, such as social security numbers, bank account numbers, passport and driver's license numbers, is expressly forbidden. All submissions should be purged of PII prior to submission.

Business Proprietary Information (limited rights) should also not be included in the data submitted. Data submitted will eventually be made available to the public. Data subject to copyright, business arrangement, publication or purchase agreement, and all data not authorized for eventual public release should not be uploaded.

Copyrighted Material of any kind, including published or pending journal articles, should not be uploaded to the catalog. When publicly available elsewhere, these data can, however, be linked to, if permanently hosted on other sites, using the Add Link button.

The Main Idea

When submitting your data to the MHKDR, you should aim to make your data as usable as possible for the next person interested. The MHKDR is a tool intended to facilitate communication and data sharing between members of the greater scientific community and those advancing research in water power innovation. The MHKDR is focused on interoperability, knowledge sharing, and communication of its data catalog with partner sites (see Figure 5). To achieve these goals, the MHKDR submission form requests a standardized set of metadata fields which consist of the metadata fields required by the MHKDR partner sites. Preserving and allowing open access to data is not just about exposing them to the public to satisfy a requirement. It also entails opening them up to the possibility of reuse in new and exciting ways. To this end, data submissions should be formulated similarly to a conference paper intended to be presented to scientific peers. All data submitted to the MHKDR is ultimately disseminated to a larger network of scientific data repositories.

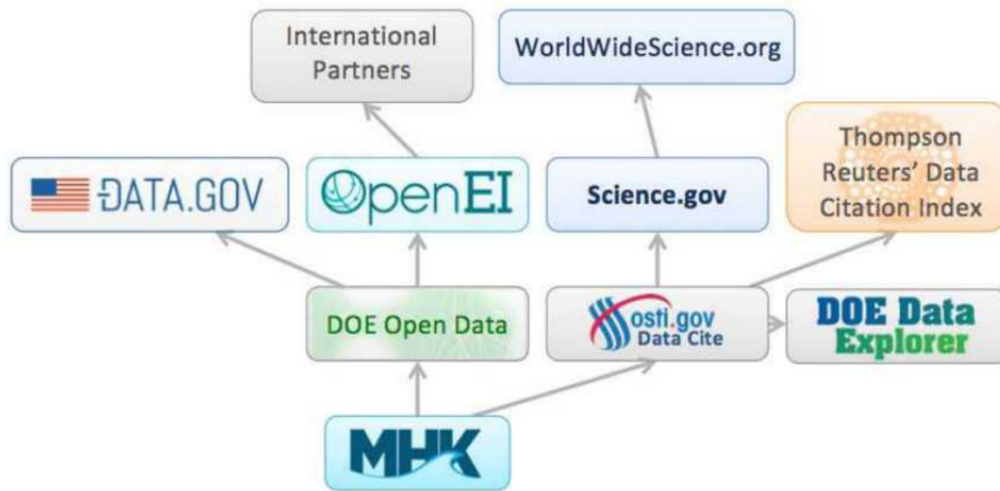

Figure 5: Propagation of metadata through the network of MHKDR data-sharing partner sites.

The Portal and Repository for Information on Marine Renewable Energy (PRIMRE)

The MHKDR is one of the repositories integrated with the Portal and Repository for Information on Marine Renewable Energy (PRIMRE), which is a digital knowledgebase and central access point for information on marine renewable energy (MRE) projects and technologies, engineering, resource characterization, device performance, and environmental effects. PRIMRE is also hosted by OpenEI with the goal of acting as a landing page for a wide range of knowledge hubs and data repositories related to marine renewable energy.

When searching for data on PRIMRE, federated content is displayed from a global search on each of PRIMRE's knowledge hubs including MHKDR. PRIMRE increases the discoverability of MRE data by making data searches easier for users by incorporating a wide range of information into a centralized search and improves MHKDR data visibility by promoting MHKDR data on a more widely used portal. PRIMRE searches incorporate metadata standards that are upheld by the MHKDR to make data across all PRIMRE knowledgebases equally accessible and discoverable. These concepts are displayed in Figure 6. The PRIMRE metadata schema and more information about PRIMRE knowledge hubs can be found at <https://openei.org/wiki/PRIMRE/Guidelines>, and more information about when you should contribute to the MHKDR over other PRIMRE knowledge hubs may be found at https://openei.org/wiki/PRIMRE/Contributing_to_PRIMRE.

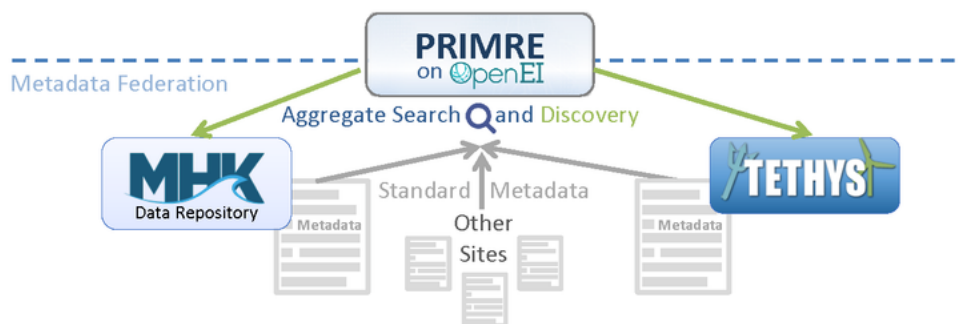

Figure 6: PRIMRE metadata federation and basic interaction with knowledge hubs

How to Organize Submissions

Data can be submitted as a single, consolidated submission or in multiple submissions. An individual submission can contain an unlimited number of data resources (files and links), but each resource must have a unique name within the submission. Submissions should be grouped into logical sets, associating like data together so that elements necessary for the comprehension of a resource are not in a different submission. If needed, a previous submission may always be linked to from a newer submission as one of its resources.

Combining resources by zipping or archiving should only be done when the resources are of little use individually. For example, the zipping of individual shapefile components into a single shapefile resource is strongly encouraged. Zipping is also recommended when submitting large quantities of files which are otherwise unable to be adequately organized. In this case, a separate file describing the structure and contents of the files should be included to allow ease of navigation.

Submission Name

Submission names should be as descriptive as possible, without being overwhelmingly long. As a convention, MHKDR submission titles are to include the project name or abbreviation, the type of data, and the location that the data is applicable to. Sometimes, a time frame may be useful as well. If the project name is long, it should be abbreviated using the project's standard abbreviation. If anything is abbreviated in the title, make sure to elaborate on the abbreviation later in the abstract. Location of the data should be included in the title if it is important to the context of the data. If the data are applicable no matter the location, then the location should be left out of the title. And lastly, if the data are applicable only to a specific point in time or time frame, then that point in time or time frame should be included in the submission name as well. Figure 7 shows an example of a good submission name from an existing MHKDR submission. In this example, "Admiralty Inlet" describes the location that the data apply to, "Hub-Height Turbulence Measurements" describes the specific type of data included, and June 2012 describe the time frame that the data are applicable to. The project name is not included in this case because the data are general enough to be useful without the context of the project.

Data Submission Name

Admiralty Inlet Hub-Height Turbulence Measurements from June 2012

Provide a specific name for the title of this set of data resources that differentiates it from other submissions.

Figure 7: Example submission name from an existing MHKDR submission

Abstract

The abstract should describe the submission as a whole, including information about when the experiment was carried out, the types of data that were collected, and any general nuances of the data. Consider the following questions, and whether or not their answers apply to the submission as a whole, when describing data files:

- What is in each data file?
- When, where, why and how was the data was captured/collected?
- Are the units for the data obviously and unambiguously labeled?
- What would someone need to know to use the data properly?

- Are there any assumptions, proprietary software requirements, or other prerequisites to using the data?

The answers to these questions that are not unique per data resource should be included in the submission abstract. If they are unique per data resource, the responses should be included in the data resource descriptions instead, which is discussed in the Resource Description section below. An example abstract from an existing MHKDR submission is shown in Figure 8. In this example, it is clear that the data files include measurements from Admiralty Head, in Admiralty Inlet of velocity, acceleration, and angular rate. The units are provided for each of these measurements, and the vector component orientations are described. The abstract refers users to the Nortek Manual for additional information, and lets users know that the Python-based open source DOLfYN library was used to process the data.

Description

This data is from measurements at Admiralty Head, in Admiralty Inlet. The measurements were made using an IMU equipped ADV mounted on a mooring, the 'Tidal Turbulence Mooring' or 'TTM'. The inertial measurements from the IMU allows for removal of mooring motion in post processing. The mooring motion has been removed from the stream-wise and vertical velocity signals (u, w). The lateral (v) velocity may have some 'persistent motion contamination' due to mooring sway. The ADV was positioned 11m above the seafloor in 58m of water at 48.1515N, 122.6858W.

Units

- Velocity data (_u, urot, uacc) is in m/s.
- Acceleration (Accel) data is in m/s^2.
- Angular rate (AngRt) data is in rad/s.
- The components of all vectors are in 'ENU' orientation. That is, the first index is True East, the second is True North, and the third is Up (vertical).
- All other quantities are in the units defined in the Nortek Manual.

Motion correction and rotation into the ENU earth reference frame was performed using the Python-based open source DOLfYN library (linked in resources). Details on motion correction can be found there.

Describe the data included in this submission. Include any assumptions or prerequisites for use.

Figure 8: Example abstract from an existing MHKDR submission

Submission Keywords

Keywords are added to MHKDR submissions to help organize data and increase visibility by making the dataset appear in searches. The keywords “MHK,” “Marine,” “Hydrokinetic,” “energy,” and “power” are automatically added to each submission to help datasets appear in broad search engine results, but can be removed by hitting the small gray ‘x’ in any box or using the backspace key on your keyboard.

The MHKDR’s search page has a faceted search option that allows the user to browse and select structured facets representing available data (see Figure 9). Facets filter submissions using keywords and are grouped by technology, topic, data type, and project. Ideally, each submission should be categorized as at least one technology, topic, data type, and project although this is not always the case. For example, gathering of tidal turbulence data from a possible resource may not have a known associated technology yet. In such cases, it is okay to exclude technology keywords.

Figure 9: The technologies portion of the MHKDR search facets

Tables 1-5 provide keyword suggestions for each type of submission. Keywords must align with “Strongly Suggested Keywords” in order to be sorted properly into search facets. “Additional Suggested Keywords” are meant to serve as ideas for further increasing the discoverability of each MHKDR submission. The user should use these suggested keywords as a starting point, and then expand by adding other applicable keywords.

Figure 10 shows an example list of keywords associated with an existing MHKDR submission. In this example, the associated topic is “tidal turbulence,” which falls under “resource” (see Table 2). The “code” data type is one of the data types included in Table 3 that can be found in the example. The project is unspecified in the keywords because there is no well-known project name, and the technology is unspecified because tidal energy may be utilized by multiple different technology types.

Supply several keywords that describe the information in this submission.
 For example: Point Reyes wave energy WEC water velocity

Figure 10: Automatic keywords and keyword input on MHKDR submission form

Technologies

Technologies are defined as techniques for utilizing MHK energy. Submissions may classify as more than one technology, for example, if a submission is comparing two or more technologies. Technologies are broken down into sub-technologies to further refine search results. These categories are subject to change as these technologies progress. Table 1 shows the recommended keywords for each MHK energy technology type. This is subject to change as these technologies progress.

Table 1: Technologies – Type(s) of MHK energy converters that project or submission may pertain to		
Technology	Sub-Technology	Strongly Suggested Keywords
Current Energy Converter (CEC)	Axial Flow Turbine	“axial flow turbine” and “CEC”
	Cross Flow Turbine	“cross flow turbine” and “CEC”
	Oscillating Hydrofoil	“oscillating hydrofoil” and “CEC”
	Tidal Kite	“tidal kite” and “CEC”
	Archimedes Screw	“archimedes screw” and “CEC”
Wave Energy Converter (WEC)	Attenuator	“attenuator” or “surface attenuator” and “WEC”
	Point Absorber	“point absorber” or “point absorber buoy” and “WEC”
	Pressure Differential	“pressure differential” and “WEC”
	Oscillating Water Column	“oscillating water column” and “WEC”

	Overtopping	“overtopping” or “overtopping device” and “WEC”
	Surge Converter	“surge converter” and “WEC”
	Terminator	“terminator” and “WEC”
Ocean Thermal Energy Converters (OTEC)	Closed Cycle	“closed-cycle” and “OTEC”
	Open Cycle	“open-cycle” and “OTEC”
	Hybrid	“hybrid” and “OTEC”
Salinity Gradient	Pressure Retarded Osmosis	“pressure retarded osmosis” and “salinity gradient”
	Reverse Electrodialysis	“electrodialysis” or “reverse electrodialysis” and “salinity gradient”

Topics

Topics are defined as research areas that exist in marine and hydrokinetic energy and are not limited to a specific technology. Some topics are split into sub-topics to further refine results. Others, such as “Environmental,” “Resource,” and “Technology” are not because few MHKDR submissions currently fall into these categories, and further refining is not necessary. Table 2 shows the suggested keywords for some of the most common topics associated with MHKDR submissions.

Table 2: Topics – Research areas that don’t fall under one specific MHK energy converter technology			
Topic Type	Sub-Topic	Strongly Suggested Keywords	Additional Suggested Keywords
Economics	LCOE	“LCOE” and “economics”	
	Cost Assessment	“cost assessment” and “economics”	
	Supply Chain	“supply chain” and “economics”	
Environmental		“environment” and	Type of environmental data
Resource		“resource”	Type of resource data (e.g. “wave height”)
Technology		“technology”	Type of technological data (e.g. “system model”)

Data Types

The data types keywords are mostly based on the assigned resource type for each resource; however, some of these categories are rather vague. To reduce ambiguity, the MHKDR splits some of its data types up further using keywords. While code resources may be faceted using assigned resource types, it is useful to include the associated languages and programs so that users may further refine results if needed. Table 3 shows suggested keywords associated with various data types.

Resource Type	Strongly Suggested Keywords	Additional Suggested Keywords
Geospatial Data	“geospatial data”	type of geospatial data (e.g. “shapefile”, “GeoTIFF”, “raster”, etc.)
Raw data	“raw data”	condition of raw data (e.g. “pre-processed” or “preprocessed”, etc.)
Processed Data	“processed data”	condition of processed data (e.g. “reprocessed” or “re-processed”, etc.)
Code	“code”, “algorithm”, “software package”, or “application”	associated program(s) or language(s) (e.g. “MATLAB”, etc.)

Projects

Even if the project name is already included in the title or description, or if the project is not well known, an abbreviated version of the project name should always be included in the keywords to enable project searches. Table 4 includes a list of suggested keywords related to projects in general. Table 5 provides specific examples.

Strongly Suggested Keywords	Additional Suggested Keywords
Important, descriptive words within project name, project abbreviation or acronym, specific project location if more than one project location	Terms related to the project technology, specific location or associated known MHK resource area (see Table 5 for examples)

The MHKDR’s faceted search page includes facets for five featured projects deemed to be the most popular in terms of data upload and data download. These projects are subject to change as new projects are awarded and additional data is uploaded to the MHKDR. Table 5 shows suggested keywords for the currently featured projects.

Project	Team or sub-Project Name	Strongly Suggested Keywords	Additional Suggested Keywords
----------------	---------------------------------	------------------------------------	--------------------------------------

Wave Energy Prize (WEP)	AquaHarmonics	“AquaHarmonics” and “WEP”	
	CalWave Power Technologies	“CalWave” and “WEP”	
	Waveswing America	“Waveswing” and “WEP”	
	Oscilla Power	“Oscilla Power” and “WEP”	
	RTI Wave Power	“RTI Wave Power” and “WEP”	
	Sea Potential	“Sea Potential” and “WEP”	
	Harvest Wave Energy	“Harvest Wave Energy” and “WEP”	
	M3 Wave	“M3 Wave” and “WEP”	
	SEWEC	“SEWEC” and “WEP”	
Resource Characterization	Waves	“wave” and “characterization”	
	Tidal Streams	“tidal” and “characterization”	
	Ocean Currents	“ocean” and “current” and “characterization”	
	River Currents	“river” and “characterization”	
	Ocean Thermal Gradients	“ocean” and “thermal gradient” and “characterization”	
Marine and Hydrokinetic Toolkit (MHKiT)	National Renewable Energy Laboratory, Pacific Northwest National Laboratory, and Sandia National Laboratories	“MHKiT”	Relevant functionality (e.g. “quality control”, “wave performance”, etc.)
Powering the Blue Economy	Water Power Technologies Office, National Renewable Energy Laboratory, and Pacific Northwest National Laboratory	“powering the blue economy” and “blue economy”	Specific application (e.g. “isolated power systems”, “coastal resiliency”, etc.)

Reference Model Project (RMP)	Sandia National Laboratories	“RMP” and “reference model”	Relevant technology (e.g. “tidal current turbine”, etc.)
Science, Technology, Engineering, and Math (STEM) for Marine Renewable Energy	Water Power Technologies Office, National Renewable Energy Laboratory, Pacific Northwest National Laboratory, and Sandia National Laboratories	“STEM”	Specific type of resource (e.g. “curriculum”) and application (e.g. “ocean current”)
Testing Expertise and Access for Marine Energy Research (TEAMER)		“TEAMER”	Application (e.g. “testing infrastructure”, testing protocol”)

Organization and Contact Information, Authors, and DOE Project Information

Organization and Contact Information

The MHKDR submission form requires an organization and contact information to supply information to users who may have questions about the data contained in the submission. This information is also used by curators during the curation process if the curator needs clarification, additional information, or additional data. This section requires a contact name, email, and organization. The phone number field is optional. Also required is an origination date for the dataset. This should be the date that the most recent resource in the submission was finalized.

Authors

The authors section is intended to give contributors credit for their work in putting together the data and associated publications. All contributors should be included with a first name, last name, and organization. If available, an author’s ORCID ID may be included as well.

DOE Project Information

DOE project information is required for the purpose of data organization and record-keeping. It is important that this metadata is correct because it’s used for organizing submissions by project, allowing related data submissions to be displayed at the bottom of each submission. In addition, WPTO project leads listed within this section of a MHKDR submission receive an email upon submission and will soon also receive an email when the data submission is published. This allows WPTO project leads to monitor individual projects’ data submissions to ensure project teams are meeting their data submission requirements as laid out in their data management plans.

Data Resources

A user can add as many data resources as they like to an MHKDR submission. For recommendations on how to organize files and data resources, see the File Organization section under Data Management Best Practices above.

Data resources may be either links or files, and require the user to add a display name, resource type, resource description, creation date, and location for each resource. All data resources also have an associated size which is determined automatically by the MHKDR. Figure 11 shows an example list of data resources associated with an existing MHKDR submission.

Links

Links to files or websites may be added if relevant data is permanently and publicly available elsewhere. This is done by clicking the ‘Add Link’ button. The link you submit must be a permanent URI (i.e. a URL that leads directly to a resource and does not pass through a search page or require more than one click to navigate to the data). Figure 12 shows examples of good and bad URLs.

Display Name

Each data resource is automatically given a display name that is equivalent to the file name. The display name should be changed if the file name is unclear about what is contained in the data resource or if the file names do not clearly separate each file from other files in the submission. Changing the display name does not change the file name, it only changes how file name is displayed within the MHKDR and the Data Partners. Figure 11 includes an example of how to name data resources.

Resource Type

The submission form will auto select a resource type based off the file extension, but this selection is not always correct. Please double check and change resource type if necessary. Options in the resource type drop-down menu are determined by the file extension. If you don’t see accurate resource type, select “Other.” Resource type affects Data Type search facet population, but also determines whether or not the MHKDR submission may receive a digital object identifier (DOI). DOI’s are not assigned to Documents or Presentations because the U.S. DOE’s Office of Scientific and Technical Information (OSTI) does not consider these resource types to be “data.” Figure 11 includes some example resource types.

Resource Description

The resource descriptions should not be the same as the submission description. They should briefly describe the individual data resources, what makes them different from the other data resources in the submission, and their nuances. Consider the following questions, and whether or not their answers are unique per file, when describing data files:

- What is in each data file?
- When, where, why and how was the data was captured/collected?
- Are the units for the data obviously and unambiguously labeled?
- What would someone need to know to use the data properly?
- Are there any assumptions, proprietary software requirements, or other prerequisites to using the data?

If the answers to these questions are unique per data resource, this information should be included in the resource descriptions. Otherwise, the responses should be included in the submission abstract instead, as discussed in the Abstract section above. Figure 11 includes an example resource description.

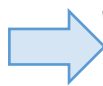

Creation Date

A creation date should be added to each individual data file to describe when each file was created or last updated. If this is a range of dates, choose the end of that range. If the exact date that a data resource was created is unknown, an informed estimate is sufficient. Figure 11 shows an example creation date.

7 Data Resources

or No limits on file size or number of files. [More information.](#)

Resource	Size	Type	Info ⓘ	Location ⓘ	Status
Data Processing.py	5.56 kB	Code	✓	✓	Complete
Admiralty Inlet 5min Averages.csv	29.22 kB	Data	✓	✓	Complete
Admiralty Inlet Processed Data.h5	464.81 MB	Data	✓	✓	Complete
Admiralty Inlet Matlab.mat	589.95 MB	Data	✓	✓	Complete
Admiralty Inlet Raw Data.vec	647.04 MB	Data	✓	✓	Complete
Marine Energy Technology Symposium paper		Document	✓	✓	Complete

<http://badsite.com/node/13>

Figure 12: Examples of good permanent URLs and bad, temporary URLs

Location

A location is required as a means of geotagging each dataset. The user may select a point or an area manually or may select from a list of locations. The pre-defined locations consist of “world,” “north america,” “contiguous US,” “east coast,” and “west coast”. Figure 13 shows an example location associated with an existing MHKDR submission. Notice that a point in space was used to define the location of interest rather than an area, and that the pre-defined areas are only available if “Area” is selected as a means of defining a location.

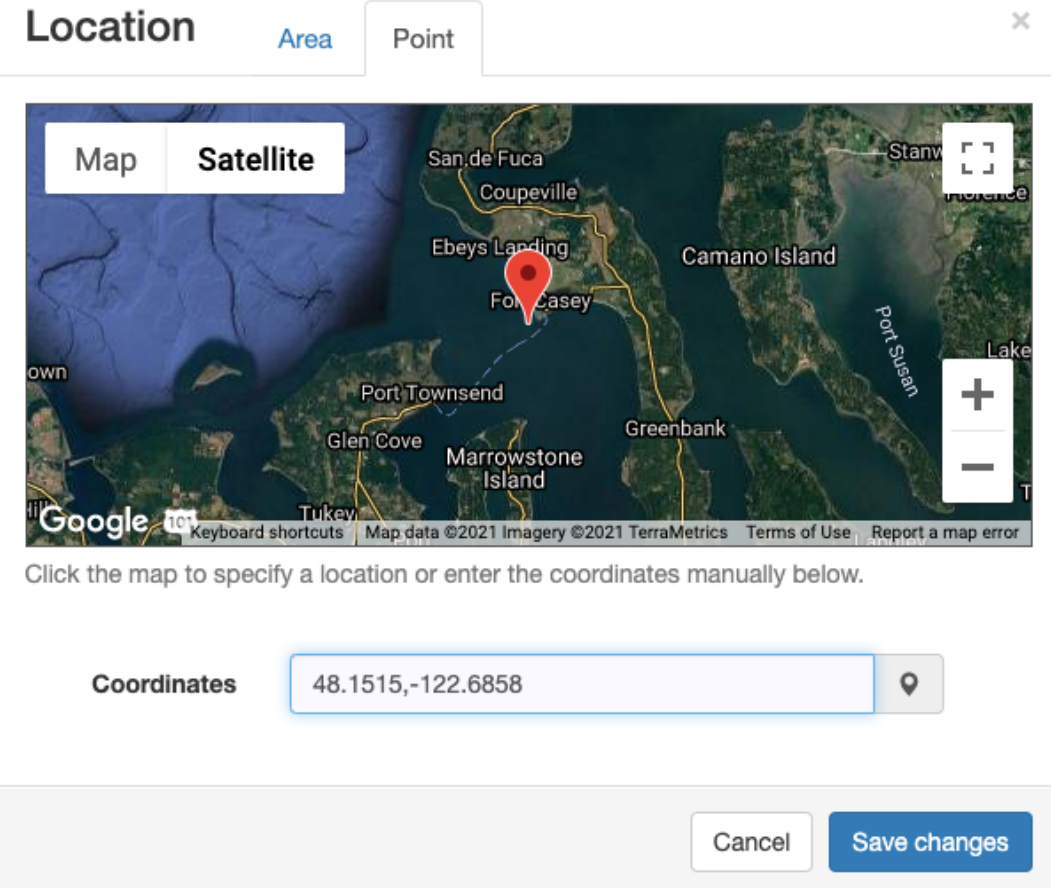

Figure 13: Example location associated with a resource in an existing MHKDR submission. Note the pre-defined area for “world” was used to draw this polygon.

Version Control

Current practice for uploading new versions of files is to supplement the existing submission with an additional, updated resource, making sure the older version remains intact. This avoids getting rid of the older version, as it likely has a DOI and may be referenced elsewhere. It also ensures that if a user happens to discover the older version, that the updated version is prominently displayed and easily accessed.

Submission Statuses, Digital Object Identifiers, and Moratoriums

Submission Statuses

Each MHKDR submission has an associated status. The statuses are intended to represent how far along a submission is in the process of publication. The statuses begin when a user starts and saves a new submission and end when the submission is publicly accessible. Figure 14 shows the progression of the statuses.

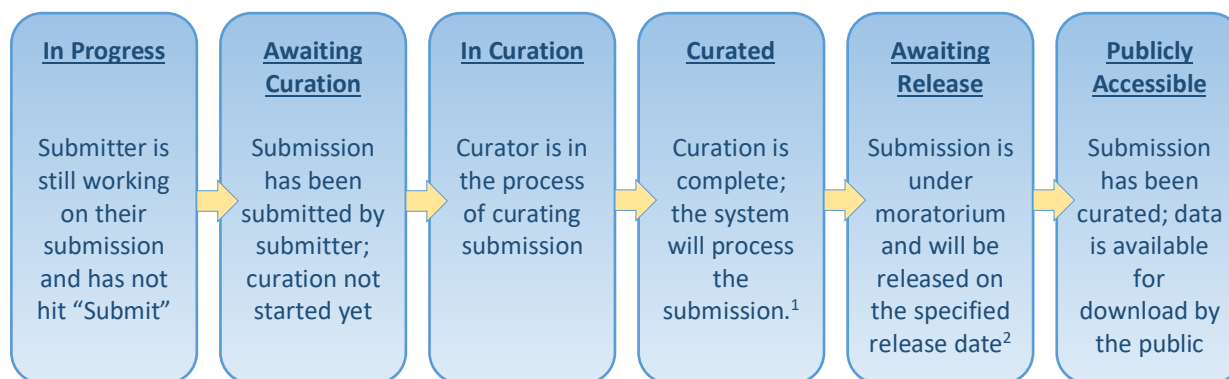

Figure 14: Flow of submission statuses with descriptions for each

¹This status only appears briefly while the system processes the action

²This status only applies to submissions under moratorium. All other submissions will be published immediately.

Digital Object Identifiers

Digital Object Identifiers (DOIs) are unique resource identifiers (URI) with permanently resolvable links to the individual data resources and are added to submissions with resources that qualify as data by U.S. Department of Energy Office of Scientific and Technical Information's (OSTI's) standards. This includes submissions that contain resources labeled as any type other than 'Document' and 'Link.' See [OSTI's Data ID Services](#) for more information on what is considered data by OSTI.

When a DOI is added to a submission, the dataset is automatically added to OSTI's DOE Data Explorer and further propagated through the network of MHKDR data partners (Figure 5).

Moratoriums

If the data are required to be submitted to MHKDR but are not ready to be made available to the public, the user may add a moratorium to the submission with a specified release date (Figure 15). When a moratorium is added to a submission, the submission metadata is made available to

the public, but the data may not be downloaded by anyone beyond the MHKDR curation team until the specified release date. This serves to protect the data until the specified date while making vital information about the data available to the scientific community. After all, there is an intrinsic value in knowing that data exist, even if they are not available yet. Contact information is made available for each dataset to allow interested parties to reach out to data owners in advance of highly anticipated data releases and inquire about the data or explore potential collaborations. Figure 16 shows an example of what is viewable to the public when a submission is under moratorium.

Moratorium

 **This submission is subject to a moratorium.**

Check this box to hold the release of your data submission. This should be checked if your contractual or project requirements specify a future release date. The data submitter and/or principal investigator must verify that the release date specified matches the date explicitly stated in your award, AOP, or contract and the conditions of the moratorium have been previously agreed upon with your DOE project officer. The moratorium will apply to all resources in this submission.

Release Date

mm/dd/yyyy  

The earliest date on which all resources in this submission will be made publicly available, defaulting to one month from today.

Figure 15: Screenshot showing the moratorium section of the MHKDR submission form. Note that you must check the box next to the lock for the release date portion to appear.

Appendix A: API Documentation

The metadata for all data stored in MHKDR are available in JSON-LD through a *data.json* drop file located at: <https://mhkdr.openei.org/data.json>.

The JSON files contains the complete metadata records for all data submissions in the MHKDR catalog and has been developed in cooperation with the U.S. Government’s Project Open Data using [the DCAT-US Schema, also known as the Project Open Data Metadata Schema](#), as a basis for the JSON-LD schema detailed below:

Catalog Fields

Field	Label	Definition	Required
@context	Metadata Context	URL or JSON object for the JSON-LD Context that defines the schema used.	No
@id	Metadata Type	IRI for the JSON-LD Node Identifier of the Catalog. This should be the URL of the data.json file itself.	No
@type	Metadata Type	IRI for the JSON-LD data type. This should be dcat:Catalog for the Catalog	No
conformsTo	Schema Version	URI that identifies the version of the Project Open Data schema being used, i.e. “ https://project-opendata.cio.gov/v1.1/schema ”	Yes
describedBy	Data Directory	URL for the JSON Schema file that defines the schema used.	No
dataset	Dataset	A container for the array of Dataset objects. See Dataset Fields below for details.	Yes

Dataset Fields

Field	Label	Definition	Required
@type	Metadata Type	IRI for the JSON-LD data type. This should be dcat:Dataset for each Dataset.	No
title	Title	Human-readable name of the asset. Should be in plain English and include sufficient detail to facilitate search and discovery.	Yes
description	Description	Human-readable description (e.g., an abstract) with sufficient detail to enable a user to quickly understand whether the asset is of interest.	Yes

keyword	Tags	Tags (or keywords) help users discover your dataset; please include terms that would be used by technical and nontechnical users.	Yes
modified	Last Update	Most recent date on which the dataset was changed, updated or modified.	Yes
publisher	Publisher	The publishing entity.	Yes
accessLevel	Public Access Level	The degree to which this dataset could be made publicly available, regardless of whether it has been made available. Choices: public (Data asset is or could be made publicly available to all without restrictions), restricted public (Data asset is available under certain use restrictions), or non-public (Data asset is not available to members of the public).	Yes
bureauCode	Bureau Code	Federal agencies, combined agency and bureau code from OMB Circular A-11, Appendix C (PDF, CSV in the format of "019:20").	Yes
sectors	Program Codes	Federal agencies, list the primary program related to this data asset, from the Federal Program Inventory. Use the format of "019:001".	Yes
license	License	The license or non-license (i.e. Public Domain) status with which the dataset or API has been published. See Open Licenses for more information.	If applicable
distribution	Distribution	An array of Distribution objects. See Dataset Distribution Fields below for details.	If applicable
dataQuality	Data Quality	Whether the dataset meets the agency's Information Quality Guidelines (true/false).	No
issued	Release Date	Date of formal issuance.	No
landingPage	Homepage URL	This field is not intended for an agency's homepage (e.g. www.agency.gov), but rather if a dataset has a human-friendly hub or landing page that users can be directed to for all resources tied to the dataset.	No
DOI	DOI	Digital Object Identifier	If applicable
projectLead	Project Lead	The person at DOE directly reported to for this project.	If applicable
projectTitle	Project Title	The official title of this project, from the AOP or DOE award.	If applicable
projectNumber	Project Number	DOE Project Number, CPS Number, or AOP WBS number. Examples: EE0012345, 12345, or FY13 AOP 1.2.3.45.	If applicable

fullName	Contact Name	Contact name, first and last, of the contact for this dataset.	Yes
email	Contact Email	Email address for contact.	Yes
phone	Contact Phone Number	Phone number for contact.	Yes
publisher	Publisher	Publishing organization	Yes
submitted	Submission Date	Date dataset was submitted	Yes
authors	Dataset Authors	Authors of the dataset. See Authors below for details.	Yes

Dataset Distribution Fields

Field	Label	Definition	Required
name	Title	Human-readable name of the distribution.	Yes
desc	Description	Human-readable description of the distribution.	Yes
size	Size	Size of resource if resourceType is file.	If applicable
resourceType	Resource Type	Either “file” or “link”.	Yes
sampleDate	Sample Date	Sample or Creation date	Yes
URI	Download URL	URL providing direct access to a downloadable file of a dataset.	Yes
coordinates	Coordinates	Lat/lon for the distribution.	If applicable
extent	Bounding Coordinates	NE and SW coordinates of bounding box describing location of distribution.	If applicable
languages	Languages or Technologies	List of languages or technologies on which the dataset depends.	If applicable

Catalog Fields

Field	@context
Required	No
Accepted Values	String (URL)
Usage Notes	The URL or JSON object for the JSON-LD Context that defines the schema used. The URL for version 1.1 of the schema is https://projectopen-data.cio.gov/v1.1/schema/catalog.jsonld
Example	<code>{"@context": "https://project-opendata.cio.gov/v1.1/schema/catalog.jsonld"}</code>

Field	@id
Required	No
Accepted Values	String (IRI)

Usage Notes	A unique identifier for the Catalog as defined by JSON-LD Node Identifiers. This should be the URL of the data.json file itself.
Example	{"@id": https://data.nrel.gov/submissions/18 }

Field	@type
Required	No
Accepted Values	String (IRI)
Usage Notes	The metadata type as defined by JSON-LD data types. This should be dcat:Catalog for the Catalog.
Example	{"@type": "dcat:Catalog"}

Field	conformsTo
Required	Yes
Accepted Values	String (URI)
Usage Notes	This is used to identify the schema version using a URI. The URI for version 1.1 of the schema is https://project-open-data.cio.gov/v1.1/schema .
Example	{"conformsTo": " https://project-open-data.cio.gov/v1.1/schema "}

Field	describedBy
Required	No
Accepted Values	String (URL)
Usage Notes	This is used to specify a JSON Schema file that defines all fields. By default, it is recommended that the canonical JSON Schema file is referenced (https://project-open-data.cio.gov/v1.1/schema/catalog.json) but if the schema had been extended, publishers may reference a file that defines those extensions.
Example	{"describedBy": " https://project-opendata.cio.gov/v1.1/schema/catalog.json "}

Field	dataset
Required	Yes
Accepted Values	Array of Objects
Usage Notes	This field is a container for an array of Dataset objects. See Dataset Fields below for details.
Example	{“dataset”: [...]}

Dataset Fields

Field	@type
Required	No
Accepted Values	String (IRI)
Usage Notes	The metadata type as defined by JSON-LD data types. This should be dcat:Dataset for the Dataset

Example	<code>{"@type": "dcat:Dataset"}</code>
---------	--

Field	title
Required	Yes
Accepted Values	String
Usage Notes	Acronyms should be avoided.
Example	<code>{"title": "Types of Vegetables"}</code>

Field	description
Required	Yes
Accepted Values	String
Usage Notes	This should be human-readable and understandable to an average person.
Example	<code>{"description": "This dataset contains a list of vegetables, including nutrition information and seasonality. Includes details on tomatoes, which are really fruit but considered a vegetable in this dataset."}</code>

Field	keyword
Required	Yes
Accepted Values	Array of strings
Usage Notes	Surround each keyword with quotes. Separate keywords with commas. Avoid duplicate keywords in the same record.
Example	<code>{"keyword": ["vegetables", "veggies", "greens", "leafy", "spinach", "kale", "nutrition"]}</code>

Field	modified
Required	Yes
Accepted Values	ISO 8601 Date
Usage Notes	Dates should be ISO 8601 of highest resolution. In other words, as much of YYYY-MM-DDThh:mm:ssTZD as is relevant to this dataset.
Example	<code>{"modified": "2021-01-15"} or {"modified": "2021-01-15T12:00:01Z"}</code>

Field	publisher
Required	Yes
Accepted Values	String
Usage Notes	Publishing organization.
Example	<code>{"publisher": "United States Geological Survey"}</code>

Field	accessLevel
Required	Yes
Accepted Values	Must be one of “public”, “restricted public”, or “non-public”.
Usage Notes	This field refers to the degree to which this dataset could be made available to the public, regardless of whether it is currently available to the public. For example, if a member of the public can walk into your agency and obtain a dataset, that entry is public even if there are no files

	online. A restricted public dataset is one only available under certain conditions or to certain audiences (such as researchers who sign a waiver). A nonpublic dataset is one that could never be made available to the public for privacy, security, or other reasons as determined by your agency.
Example	<code>{"accessLevel":"public"}</code>

Field	bureauCode
Required	Yes
Accepted Values	Array of Strings
Usage Notes	Represent each bureau responsible for the dataset according to the codes found in OMB Circular A-11, Appendix C (PDF, CSV). Start with the agency code, then a colon, then the bureau code.
Example	The Office of the Solicitor (86) at the Department of the Interior (010) would be: <code>{"bureauCode":["010:86"]}</code> . If a second bureau was also responsible, the format like this: <code>{"bureauCode":["010:86","010:04"]}</code> .

Field	sectors
Required	Yes
Accepted Values	Array of strings
Usage Notes	Provide an array of programs related to this data asset, from the Federal Program Inventory.
Example	<code>{"programCode":["015:001"]}</code> or if multiple programs, <code>{"programCode":["015:001","015:002"]}</code>

Field	license
Required	Yes, if applicable
Accepted Values	String (URL)
Usage Notes	See list of license-free declarations and licenses.
Example	<code>{"license":"http://creativecommons.org/publicdomain/zero/1.0/"}</code>

Field	distribution
Required	If applicable
Accepted Values	Array of objects
Usage Notes	This is a container for one or multiple distribution objects which group together the fields: name, desc, size, resourceType, sampleDate, URI, coordinates, extent, and languages.
Example	See below

```
"distribution": [
  {
    "name": "Building Characteristics for Residential Hourly Load Data.pdf",
    "size": "204463", "desc": "Documentation for the data index",
    "resourceType": "file",
    "sampleDate": "2014-10-14T06:00:00Z",
```

```

"coordinates": [
  36.9255,
  -95.9916
],
"extent": {
  "boundingCoordinatesNE": [
    49.2637,
    -66.5318
  ],
  "boundingCoordinatesSW": [
    24.5873,
    -125.4514
  ]
},
"URI":
"https://data.openei.org/files/153/buildingcharacteristicsforresidentialhourlyloaddata.pdf"
},
{
  "name": "TMY2 Residential Base.zip",
  "size": 111934369,
  "desc": "TMY2 Data",
  "resourceType": "file",
  "sampleDate": "2014-11-20T07:00:00Z",
  "coordinates": [
    36.9255,
    -95.9916
  ],
  "extent": {
    "boundingCoordinatesNE": [
      49.2637,
      -66.5318
    ],
    "boundingCoordinatesSW": [
      24.5873,
      -125.4514
    ]
  }
},
"URI": "https://data.openei.org/files/153/EPLUS\_TMY2\_RESIDENTIAL\_BASE.zip"
}
]

```

Field	dataQuality
Required	No
Accepted Values	Boolean true or false
Usage Notes	Indicates whether a dataset conforms to the agency's information quality guidelines.
Example	{"dataQuality": true}

Field	issued
-------	--------

Required	No
Accepted Values	ISO 8601 Date
Usage Notes	Dates should be ISO 8601 of highest resolution. In other words, as much of YYYY-MM-DDThh:mm:ssTZD as is relevant to this dataset.
Example	{"issued": "2021-01-15"} or {"issued": "2021-01-15T12:00:01Z"}

Field	landingPage
Required	No
Accepted Values	String (URL)
Usage Notes	This field is not intended for an agency's homepage (e.g. www.agency.gov), but rather if a dataset has a human-friendly hub or landing page that users can be directed to for all resources tied to the dataset.
Example	{"landingPage": " https://data.openei.org/submissions/309 "}

Field	DOI
Required	If applicable
Accepted Values	String
Usage Notes	Digital object identifier for the dataset, if one exists.
Example	{"DOI": "10.15121/1261909"}

Field	projectLead
Required	If applicable
Accepted Values	String
Usage Notes	Name of person at DOE directly reported to for this project.
Example	{"projectLead": "Mike Weathers"}

Field	projectTitle
Required	If applicable
Accepted Values	String
Usage Notes	The official title of this project, from the AOP or DOE award.
Example	{"projectTitle": "Wind and EERE-Solar 32307 and 1.2.5.401"}

Field	projectNumber
Required	If applicable
Accepted Values	String
Usage Notes	DOE Project Number, CPS Number, or AOP WBS number
Example	{"projectNumber": "EE0012345"} or {"projectNumber": "FY21 AOP 1.2.3.45"}

Field	fullName
Required	Yes
Accepted Values	String
Usage Notes	Contact name, first and last, of the contact for this dataset.

Example	{“fullName”: “Ezra Zemach”}
---------	-----------------------------

Field	email
Required	Yes
Accepted Values	String (email address)
Usage Notes	Email address for this dataset’s contact.
Example	{“email”: “ ted.jones@nrel.gov ”}

Field	phone
Required	Yes
Accepted Values	String (phone number)
Usage Notes	Phone number for this dataset’s contact.
Example	{“phone”: “303-275-1234”}

Field	publisher
Required	Yes
Accepted Values	String
Usage Notes	Publishing organization
Example	{"publisher": "Davenport Newberry Holdings, LLC"}

Field	submitted
Required	Yes
Accepted Values	ISO 8601 Date
Usage Notes	Submission date. Dates should be ISO 8601 of highest resolution. In other words, as much of YYYY-MM-DDThh:mm:ssTZD as is relevant to this dataset.
Example	{"submitted": "2021-01-15"} or {"submitted": "2021-01-15T12:00:01Z"}

Field	authors
Required	Yes
Accepted Values	Array of objects
Usage Notes	Authors of the dataset
Example	See below.

```
"authors": [
  {
    "firstName": "John",
    "lastName": "Shervais",
    "affiliation": "Utah State University"
  },
  {
    "firstName": "James P.",
    "lastName": "Evans",
    "affiliation": "Utah State University"
  }
]
```

]

Dataset Distribution Fields

Field	name
Required	Yes
Accepted Values	String
Usage Notes	Human-readable name of the distribution, or resource
Example	{"name": "Final Technical Report.pdf"}

Field	desc
Required	Yes
Accepted Values	String
Usage Notes	Human-readable description of the distribution, or resource.
Example	{"desc": "Data released under the Department of Energy's Open Energy Data Initiative (DOE)."}}

Field	size
Required	Yes, if distribution resourceType is "file".
Accepted Values	Integer
Usage Notes	Size of file resource in bytes.
Example	{"size": 300469}

Field	resourceType
Required	Yes
Accepted Values	String
Usage Notes	Either "file" or "link".
Example	{"resourceType": "file"} or {"resourceType": "link"}

Field	sampleDate
Required	Yes
Accepted Values	ISO 8601 Date
Usage Notes	Sample or creation date. Dates should be ISO 8601 of highest resolution. In other words, as much of YYYY-MM-DDThh:mm:ssTZD as is relevant to this dataset.
Example	{"sampleDate": "2021-01-15"} or {"sampleDate": "2021-01-15T12:00:01Z"}

Field	URI
Required	Yes
Accepted Values	String (URL)
Usage Notes	URL providing direct access to a downloadable file of a dataset.
Example	{"URI": " https://registry.opendata.aws/oedi-data-lake/ "}

Field	coordinates
Required	If applicable
Accepted Values	Array with two floats
Usage Notes	Lat/lon for the distribution.
Example	{"coordinates": [38.031672339667, -122.18298984375]}

Field	extent
Required	If applicable
Accepted Values	Object
Usage Notes	NE and SW coordinates of bounding box describing location of distribution
Example	{"extent": {"boundingCoordinatesNE": [38.9203190,-120.7163], "boundingCoordinatesSW": [37.1430255,-123.64961]}}

Field	languages
Required	If applicable
Accepted Values	Array of strings
Usage Notes	List of languages or technologies on which the dataset depends.
Example	{"languages": ["Jupyter Notebook", "Python"]}
