

# Test Report: Wave Energy Converter Device for M3 Wave Department of Energy Wave Energy Prize 2015

Test dates: January 4 – 7, 2016

University of Michigan  
Marine Hydrodynamics Laboratory  
Department of Naval Architecture and Marine Engineering

Steven F. Zalek, PhD  
Associate Director, UM MHL

## Description of Test Facilities

The UM MHL and its Physical Modeling Basin (PMB) have a long history at UM and as a strategic asset in Midwest. Initial construction in the West Engineering Building (now West Hall) was completed in 1904 to support both the Naval Architecture and Marine Engineering department and Civil Engineering department. The PMB has had numerous upgrades through the decades and has been in continuous operation since its founding, supporting education, research and commercial activity.

### *Physical Model Basin*

The Physical Model Basin (towing tank) is nominally 360 feet long, by 21.5 feet wide, by 9.5 feet deep. The length of basin available for free-surface operations is nominally 300 feet, due to the size and position of the wavemaker and wave-absorbing beach. Figure 1, shown below, is a view along the length of the basin from the wavemaker toward the beach. The carriage can be seen in the far end of the towing basin. The foreground shows the ballast well and wavemaker.

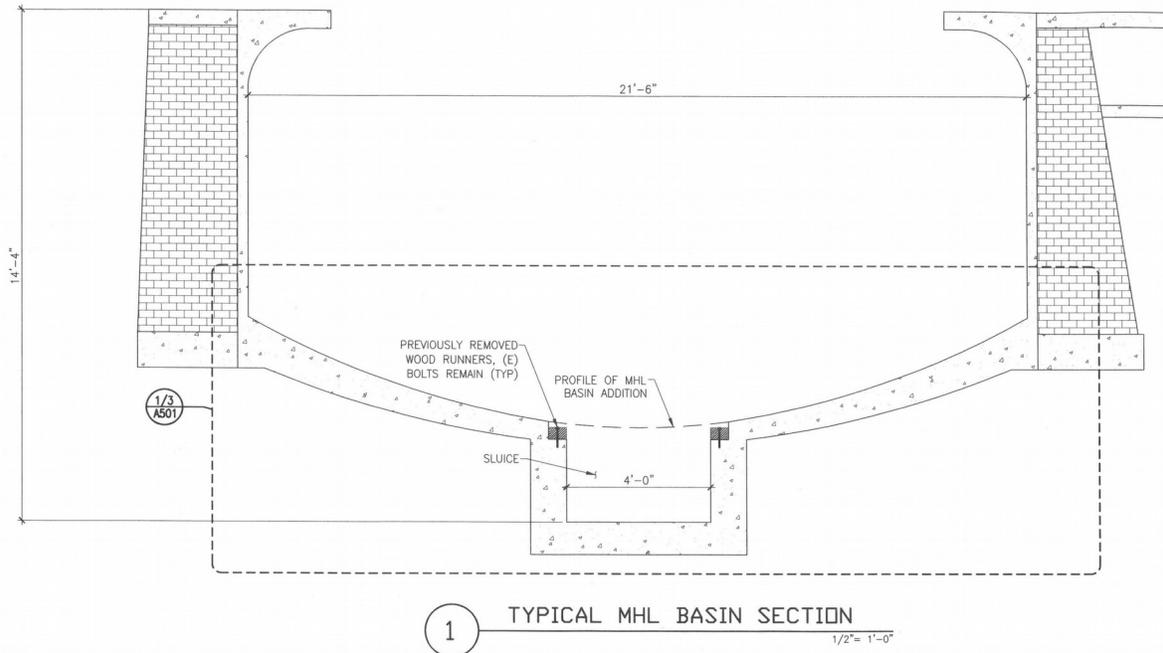

**Figure 1: View of the Physical Model Basin looking from the wavemaker toward the beach.**

The basin has a curved floor and a trench along the center that is nominally 4 feet wide, 3 feet deep, and running the length of the tank, as shown in Figure 2. This feature has a neutral impact on normal free-surface testing operations.

The PMB has four doors along its west wall and is completely secured; only select staff have keyed access. It is climate controlled with HVAC systems, etc., and is relatively comfortable to work in year-round. The PMB is relatively well lit by florescent lighting and large glass block windows along its length to the east (good diffuse light, but no visibility from outside). A few windows do allow visibility along a portion of the west wall to a public access hallway; these windows can be covered or remain uncovered. The basin (lower) walls are painted white and the floor coating is a medium-shade green-

grey; optical conditions in the water is decent and additional lighting will be used if necessary. The water quality is excellent, being chlorinated (Ann Arbor city) fresh potable water. The water is continuously processed with a fine-mesh filtration system and regularly refreshed. The water temperature is nominally 65 degrees Fahrenheit +/- 3 degrees year round; the temperature is measured to within 0.1 degree Fahrenheit during testing.

**Figure 2: Cross-sectional view of the Physical Model Basin.**

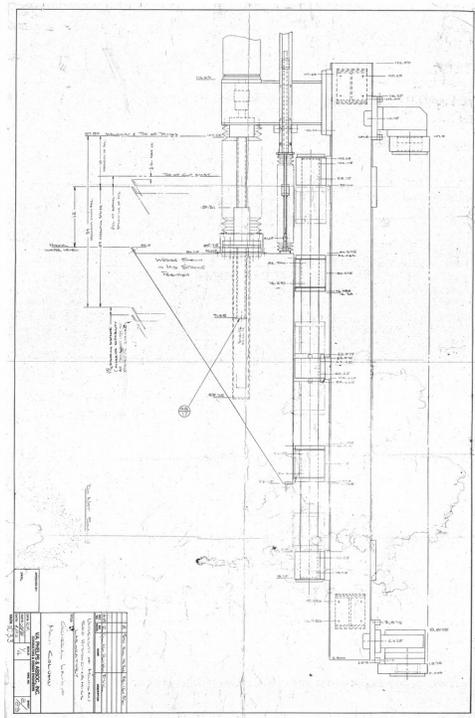

*Wavemaker*

The wavemaker consists of a vertically plunging wedge that runs on linear rails, as shown in Figures 3 and 4.

**Figure 3: Wavemaker in operation, producing irregular wave conditions.**

It is capable of producing regular plane waves and irregular plane waves for a variety of standard wave spectra. It can be locally or remotely controlled by computer. The wavemaker generally operates between frequencies of 0.4 Hz to 3.0 Hz.

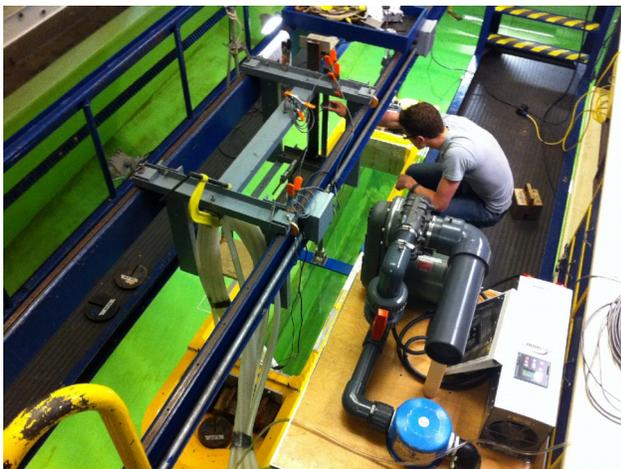

**Figure 4: Profile view of the basin wavemaker.**

### *Carriage (powered)*

The tank carriage spans the width of the tank and can traverse the length of the tank between the wavemaker and beach. It is self-powered and equipped with a variety of support equipment and platforms. Two views of the carriage are shown in Figure 5. It is primarily designed for towed-model testing, and also makes an excellent platform for fixed model testing. The carriage is capable of testing models at speeds up to 20 feet/second; the higher the speed the shorter the steady-state duration at that speed.

The carriage also supports the data acquisition system and the ability to initiate wavemaker control and other external systems such as remote video, wave height sensors, etc.

**a) Testing on-board the carriage**

**b) Carriage view from aft**

**Figure 5: Tank carriage system**

### Description of Test Setup

For the Wave Energy Prize testing campaign, the carriage was secured in-place, and augmented with additional platforms to enhance the ergonomics of setting up and adjusting the WEC devices. Figure 6 is a view from the wavemaker end of the basin, west side. In the foreground a cross-structure is visible where three ultrasonic wave probes (WP1, WP 2 and WP3) are located. These probes measure the undisturbed wave coming from the wavemaker to the WEC device.

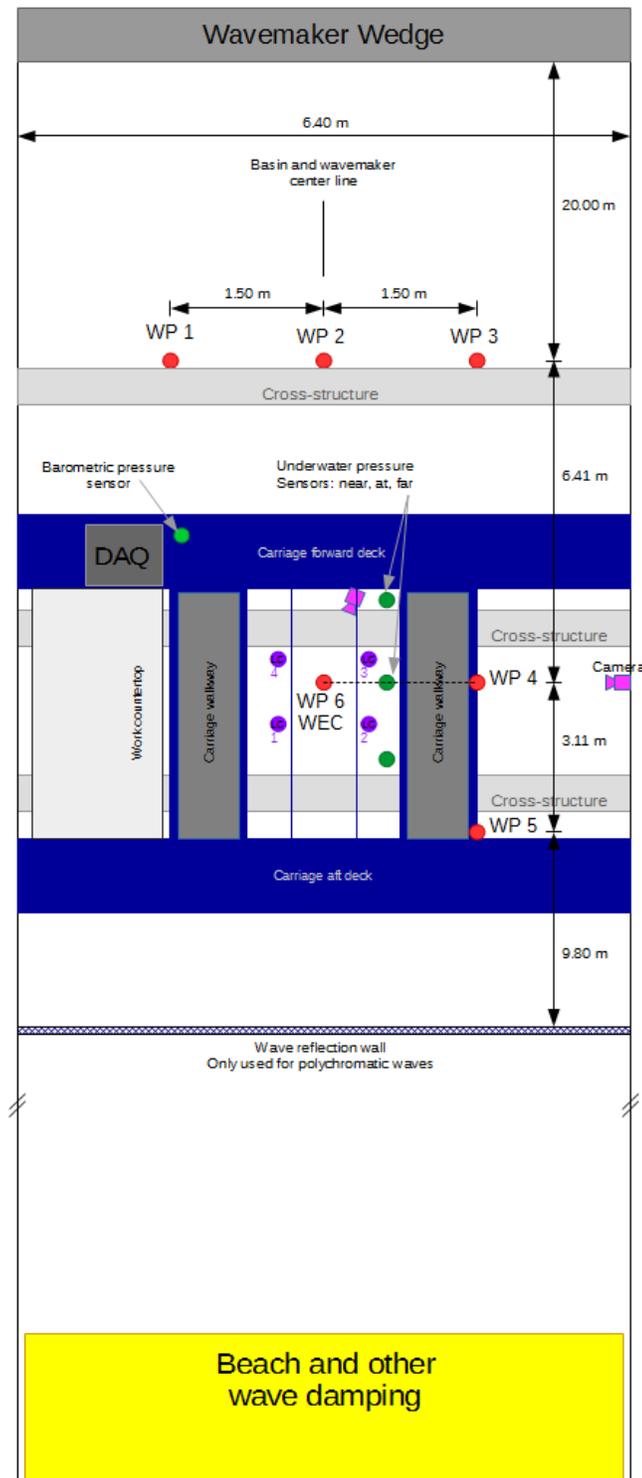

**Figure 6: Carriage in WEC testing configuration and upstream wave probes**

Figure 7 shows the area for testing the WEC devices between the carriage walkways (blue and black with yellow handrails). Additional cross-structure (aluminum scaffolding) is visible, passing beneath the carriage walkways. A set of c-channel rails (blue) pass longitudinally above the open water area; these are used to support instruments and cameras, etc.

**Figure 7: Open area between walkways on the carriage where the WEC devices are tested.**

A top-view sketch of the Physical Model Basin equipment arrangement for testing the WEC devices is shown in Figure 8. The sketch is not drawn to scale, however, key dimensions are identified.

**Figure 8: Top-view conceptual diagram of the testing equipment layout along with key dimensions**

The array of instruments used for each of the WEC tests, as shown in Figure 8, includes the following instruments, listed in Table 1.

Instrument Function	Symbol	Make	Model
Wave probes – ultrasonic	Red circle	Senix	ToughSonic 30
Underwater pressure sensor	Green circle	Impress Sensors	IMCL-G0360
		Omega Engineering	PX2300-10DI
Barometric air pressure	Light green circle	Omega Engineering	PX409-26BI
Load cell	Purple circle	Omega Engineering	LSHD-50
Digital camera	Magenta square/triangle		
3D Motion Tracking	Not shown	OptiTrack	Prime 41 cameras

**Table 1: UM MHL supplied instrumentation**

The location of the wave probes with respect to the front edge of the wavemaker is identified in Figure 8. Wave probe number 6 (WP6) was used for characterizing the wave conditions in the basin before the testing program started. This probe was located where the WEC devices were tested for each case. For the monochromatic wave cases, wave probe number 4 (WP4) was used to identify the timing between the incoming waves and the behavior of the WEC device. Since WP6 would not be available to record the data when the WEC was located there, the values from other wave probes were used to estimate the wave conditions at the WEC device.

A mapping between the average of the wave conditions at WP1, WP2, WP3 and WP4 and those at WP6 was developed for each of the monochromatic cases and used for data analysis. The results are shown in the following table:

Wave case	WP6 – WP1,2,3,4 Avg Amplitude (%)	WP6 – WP1,2,3,4 Avg Frequency (%)
M1 s 80	4.68	0.04
M2 s 80	7.00	0.13
M3 s 80	1.20	-0.09
M4 s 80	1.57	-0.01
M5 s 80	-4.84	-0.04
M6 s 80	-29.50	0.02
M7 s 80	1.51	0.03
M1 s 40	-0.95	0.10
M2 s 40	3.49	0.03
M3 s 40	0.14	-0.07
M4 s 40	0.69	-0.05
M5 s 40	-3.52	-0.04

**Table 2: Average wave amplitude correlation at WEC**

Monochromatic test case M6\_s\_80 stands out for being so different in average wave amplitude. This condition is due to a resonance near this frequency in the basin. It is dealt with by performing longer wavemaker runs for this case, getting the wave phenomena to 'lock-in' after 15 periods, and utilizing the data from that point afterward. The typical monochromatic wave test run consisted of operating the wavemaker for a duration of 25 periods plus 10 seconds (to account of 5 seconds of ramp-up and ramp-down time). The exceptions were cases M6s80 where the wavemaker was run for 40 periods plus the ramp-up/down time, and M1s80 where the wavemaker was run for 50 periods plus ramp-up/down time.

For the polychromatic test cases, the WEC was required to be exposed to the prescribed irregular wave conditions for the equivalent of 30 minutes full-scale time (4.24 minutes duration model-scale time). Running the wavemaker for this duration would obviously result in reflected energy, since the beach system is not a perfect absorber. Given the fact that reflection was going to be present, it was decided to influence the reflection conditions by installing a wave reflector wall approximately 14.4 meters from the WEC device. The wavemaker parameters were tested and determined assuming a relatively high degree of wave reflection. For the polychromatic cases, the wave data from wave probe number 2 (WP2) was used, assuming the conditions would be similar at the WEC location.

For both the monochromatic and polychromatic wave cases, the wavemaker motion control signals were defined and stored for repeated use. Each prescribed test case was run with an identical input signal, regardless of when it was run, or which WEC team it was run for. This strategy was instituted in order to minimize the differences between identical test cases.

The instrumentation data sheets and calibration records for the load cells and the wave probes are included in Appendix A. The factory calibration values were used for the three pressure sensors used underwater and for the barometric air pressure sensor.

## Instrumentation and Data Channel Lists

The data was collected on a National Instruments M-Series USB-6225 data acquisition unit coupled with the SC-2345 signal conditioning system and other input devices, which allow for the use of voltage, current, strain, digital and frequency input and output (control). National Instruments LabVIEW 2015 software was used to control the data acquisition system and collect the data. The data is stored in the LabVIEW native TDMS file format, which is more flexible than a traditional flat-file spreadsheet. The TDMS files may be easily read by LabVIEW software, or exported to a spreadsheet format for viewing/analysis.

The following file naming convention was used for data collection:

- Raw numerical: R\_M/PX\_s\_Y0\_Z\_TeamName\_DataRun#
- Raw numerical gain and offset: R\_M/PX\_s\_Y0\_Z\_TeamName\_ParametersRun#
- Raw 3D motion: M\_M/PX\_s\_Y0\_Z\_TeamName\_run#
- Video: V\_M/PX\_s\_Y0\_Z\_TeamName\_DataRun#
- Processed: P\_M/PX\_s\_Y0\_Z\_TeamName\_DataRun#

The M/P value refers to the monochromatic and polychromatic wave cases, respectively. The X refers to the M or P run identifier. The Y is the steepness identifier (either '4' for 40, or '8' for 80). The Z is the wave direction identifier (either 0, 20 or 50). The DataRun# or run# suffix was utilized to keep track of repeat runs for a given condition.

For the processed data files, the raw numerical and motion data are integrated into the file in order to be processed by the LabVIEW DiaDEM data analysis and reporting tool.

The raw data channel list is shown in table 3, below:

Data File	Channel Name	Description	Unit	Sensor	Sample Rate
R_M/PX_s_Y0_Z	Wave Probe 1	WP 1 water level	cm	Senix ToughSonic 30	200 Hz
R_M/PX_s_Y0_Z	Wave Probe 2	WP 2 water level	cm	Senix ToughSonic 30	200 Hz

Appendix A  
Instrumentation and Calibration Information

# ToughSonic® 30 Level and Distance Sensor

Windows PC or Button Setup, Liquid Tight, Multiple Outputs

Formerly TSPC-155

Senix sensors and SenixVIEW software put the power of ultrasonics in your hands yet retain the simplicity of push-button TEACH setup. You can quickly adjust, optimize, save and clone your applications without calibration!

ToughSonic sensors contain a rugged transducer potted in a stainless steel housing for long life.

Outputs respond to measured distance and non-contact technology means nothing touches your materials.

Many applications exist in all industries. Contact Senix today to discuss your specific needs.

**Button TEACH or  
PC Configured  
Non-Contact  
Ultrasonic  
Distance  
Measurement**

## Features

### Distance Measurements

- Long range, short dead band
- Unaffected by optical factors like color and transparency
- PC or button "teachable" setup
- Narrow beam with adjustments to optimize performance
- Temperature compensated

### Packaging & Performance

- Quick mounting
- Durable sealed housing for wet or dirty applications
- Short & overload protected I/O
- Multi-sensor synchronization
- Adjustable sensitivity
- Rear status indicators (3)

### Free Functionality

Use adjustable interface features like switch hysteresis and time delays to build complete solutions such as pump or material flow controllers. Save cost by eliminating PLCs, delay circuits and time delay relays!

Up to 30-ft. (9.1 m) maximum range in IP68 rated cylindrical housing

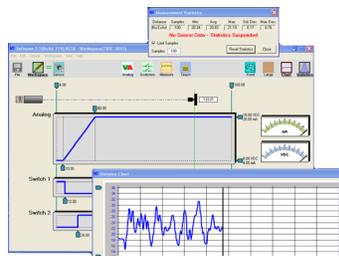

SenixVIEW PC Software included!

## PC Setup Power!

Use SenixVIEW software (see separate data sheet) to select and adjust all interfaces, timing parameters, filters and modes. Then view, analyze or log data to optimize your application.

Several push-button "teach" features also provide common adjustments without the PC.

### Stock, repairs, OEMs

Flexible configuration means fewer parts to stock and quick duplication! Higher volume OEM options are available.

## Multiple Outputs

In addition to the model's serial data interface there are five simultaneous outputs. All have SenixVIEW configurable features including ranges, target responses and time delays.

### Analog Outputs (3)

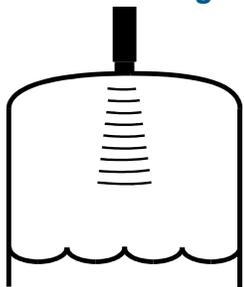

These include voltage (0-10 VDC) and two current loops (4-20 mA sinking and sourcing).

The analog slope can increase or decrease value with distance. The analog output limits can be set any distance, and have user-selected voltage/current values.

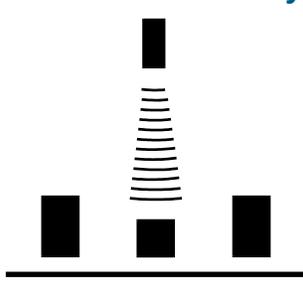

### Switches (2)

Two switches are SenixVIEW configurable as either "PNP" or "NPN" type (sourcing or sinking). Each has adjustable set point, hysteresis, window, initial conditions, ON delay, OFF delay and loss of target response for ultimate flexibility.

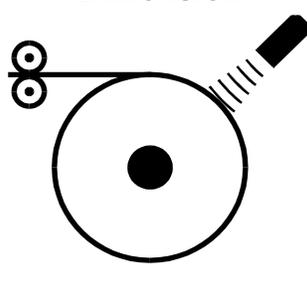

### Level or Height

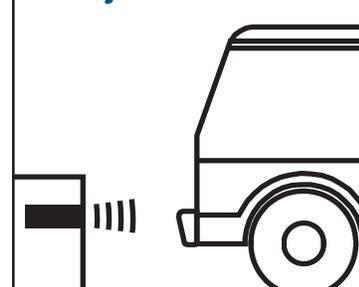

### Distance-Proximity

### Dimension

### Object Detection

# Senix ToughSonic® 30 Level and Distance Sensor

## Specifications

<b>Optimum Range</b>	10 in.- 20 ft. (25.4 cm- 6.1m)	<b>Max Range</b>	30 feet (9.1 meters)
<b>Case Material</b>	316 stainless steel	<b>Adjustment</b>	Button "teach" or SenixVIEW
<b>Temperature</b>	-40 to 158 F (-40 to 70 C)	<b>Configuration</b>	Stored in non-volatile memory
<b>Humidity</b>	0 to 100% operating	<b>Transducer</b>	Ruggedized piezoelectric
<b>Compensation</b>	Temperature compensated	<b>Protection</b>	NEMA-4X, NEMA-6P, IP68
<b>Resolution</b>	Digital: 0.0068 in. (0.172 mm); Analog: 4099 steps (0-10 VDC), 3279 steps (4-20 mA)		
<b>Repeatability</b>	Nominal 0.3% of range @ constant temp. Affected by target, distance, environment		
<b>Update Rate</b>	10 Hz (100 ms), SenixVIEW adjustable; affected by SenixVIEW filter selections		
<b>Voltage Output</b>	0-10, 0-5 VDC or PC customized; 10 mA max. (*)		
<b>Current Loop #1</b>	Current sourcing 4-20 mA or PC customized, max. loop 450Ω (*)		
<b>Current Loop #2</b>	Current sinking 4-20 mA or PC customized, max. loop 450Ω (*)		
<b>Sinking Switch</b>	150 mA max. @ 40 VDC max., teachable set point & polarity, fault indication		
<b>Sourcing Switch</b>	150 mA max. @ input voltage, teachable set point & polarity, fault indication		
<b>RS-232, RS-485</b>	Modbus protocol, 9600-115200 baud (selectable), 8 data bits, 1 stop, no parity		
<b>SYNC feature</b>	Permits up to 32 sensors to operate in close proximity without interaction		

### Target Requirements

<b>Objects</b>	Detects flat or curved objects. Surface must reflect ultrasound back to sensor.
<b>Max. Distance</b>	Affected by size, shape, orientation of target (sound level reflected back to sensor)
<b>Orientation</b>	Flat surfaces should be oriented perpendicular to sensor output beam
<b>Optical</b>	Unaffected by target color, transparency, light, or other optical characteristics

## Connections

Cable Connection	Wire	Description
Power	Brown	10-30 VDC @ 70 mA maximum; Typical: 45 mA @ 24 VDC (**)
Ground	Blue	Power and interface common
Voltage Output *	Violet	0-10 VDC, 0-5 VDC or custom end values between 0 and 10 VDC
Current Loop Output *	Green	4-20 mA sourcing (adjustable end values between 4 and 20 mA)
Current Loop Output *	Orange	4-20 mA sinking (adjustable end values between 4 and 20 mA)
Switch #1 Output	Black	Sinking ("NPN") or Sourcing ("PNP"), user selected
Switch #2 Output	White	Sinking ("NPN") or Sourcing ("PNP"), user selected
RS-232 out / RS-485-	Gray	Serial data connection (depends on model - see model selection)
RS-232 in / RS-485+	Yellow	Serial data connection (depends on model - see model selection)

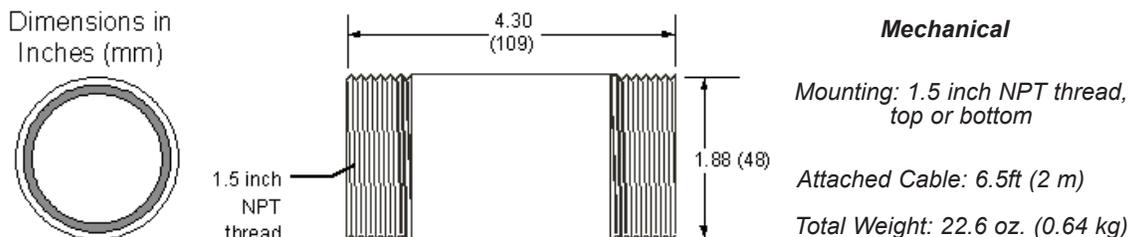

(\*) Analog outputs share common distance endpoints. Both 4-20 mA outputs share the same adjustable max / min end values. The maximum loop resistance is derated below 15 VDC input voltage.

(\*\*) At default update rate. Output currents not included. Sensitivity reduced below 15 VDC input voltage.

## Part Numbers

Model Number	Description
TSPC-15S-232	Serial RS-232 interface (PC COM port compatible)
TSPC-15S-485	Serial RS-485 interface (allows addressable multi-sensor networks)
Senix also offers interconnection, communications, mounting, and display components	

## Dimensions

# WET/WET DIFFERENTIAL PRESSURE TRANSDUCER

## UNI-DIRECTIONAL AND BI-DIRECTIONAL RANGES

**0-1 to 0-100 psid Uni-Directional**  
**±0.5 to ±50 psid Bi-Directional**

### PX2300 Series

- ✓ **0.25% Accuracy**
- ✓ **NEMA 4 (IP65) Rating**
- ✓ **Wet/Wet Corrosive Environments**
- ✓ **Ideal for Measuring Pressure Drop Across Filters**

OMEGA's PX2300 Series high-output, low differential pressure transducers are compatible with most media, from dry air to corrosive liquids. All wetted parts are stainless steel with elastomer seals. The electronics are housed in a NEMA 4 (IP65) enclosure. A high working pressure and high overpressure ratings ensure dependability in harsh industrial environments. These transducers are ideal for measuring pressure drop across filters and other process devices.

### SPECIFICATIONS

**Excitation:** 24 Vdc nominal

**Max:** 30 + 0.004 x (loop resistance Ω) Vdc

**Min:** 11 + 0.02 x (loop resistance Ω) Vdc

**Loop Resistance:** 0 to 1000 Ω

**Output:** 4 to 20 mA

**Accuracy:** ±0.25% RSS FS at constant temperature (includes linearity, repeatability and hysteresis)

**Linearity:** ±0.20% FS

**Hysteresis:** 0.10% FS

**Repeatability:** ±0.05% FS

**Operating Temperature Range:**

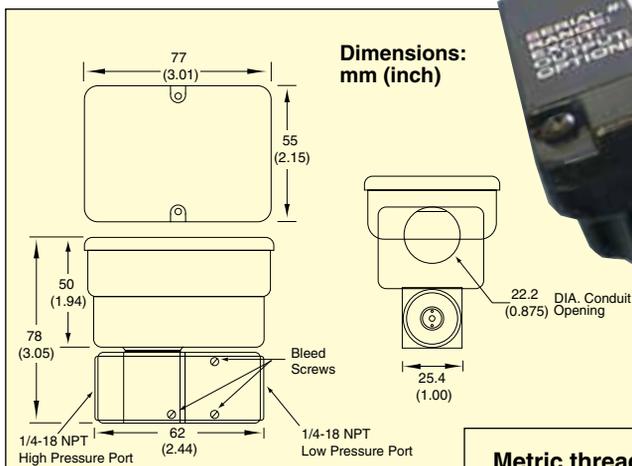

-18 to 80°C (0 to 176°F)

**Compensated Temperature Range:**

-1 to 65°C (30 to 149°F)

**Thermal Zero Effect:** <±0.02% FS/°F

**Thermal Span Effect:** <±0.02% FS/°F

**Metric thread adaptors and snubbers available, visit us online.**

PX2300-1DI, shown smaller than actual size.

**Sensor:** Capacitive

**Maximum Line Pressure:** 250 psig

**Maximum Overpressure:**

**High Side:** 1 to 5 psi = 20 x FS,  
10 to 25 psi = 10 x FS, 50 psi = 5 x FS,  
100 psi = 2.5 x FS

**Low Side:** 2.5 x FS (shift recoverable)

The zero will shift slightly when high differential pressure is applied. The shift may be as much as ±10% FS with overpressure applied to the low port. (Other parameters will not shift.) The shift may be recovered by a positive overpressure or if the overpressure is always in one direction, the user may apply this pressure to pre-set the sensor. Subsequent overloads of less pressure will not cause any further shift.

**Wetted Parts:** Air and fluids compatible with 17-4 and 300 stainless steel, FKM, and silicone O-rings

**Cavity Volume:** 0.27/0.08" pos./neg. port

**Case:** NEMA 4 (IP65)

**Pressure Port:** ¼ NPT internal

**Electrical Connection:** Internal barrier strip with 22.2 mm (0.875") conduit opening

**Response Time:** 50 ms (water)

**Weight:** 410 g (14.4 oz)

- ✓ High Accuracy  
±0.08% BSL Includes Linearity, Hysteresis, and Repeatability
- ✓ Broad Temperature Compensated Range  
-18 to 85°C (0 to 185°F)
- ✓ Premium Temperature Performance  
Span: ±0.5% Over Compensated Range
- ✓ 5-Point NIST Traceable Calibration Included
- ✓ All Stainless Steel Wetted Parts
- ✓ Fast Response Time
- ✓ Solid State Reliability and Stability
- ✓ 400% Proof Pressure

OMEGA's PX409 series electronic barometers are high-accuracy barometers available in three ranges: 16 to 32 inHg, 26 to 32 inHg, or 0 to 32 inHg (absolute pressure) for laboratory or industrial test applications. Models with integral cables (PX409) are IP67 while connector styles (PX419 and PX429) are IP65 rated. They feature all stainless steel construction, which makes them ideal for harsh industrial environments. Their high operating

temperature, broad compensated range, and excellent temperature compensation allow stable readings in applications with fluctuating temperatures commonly found where barometric pressure must be monitored. Models are available with millivolt, voltage or current outputs.

# LFS 242 - TENSION/COMPRESSION CELL

The LFS 242 is a low range load cell, which provides high accuracy for weighing or force measurement applications. This cell is made of aluminum, but is durable enough for most applications. The LFS 242 has 10-32 UNC threads on both ends of the transducer for easy installation.

- ALUMINUM CONSTRUCTION
- COMPACT SIZE
- HIGH ACCURACY

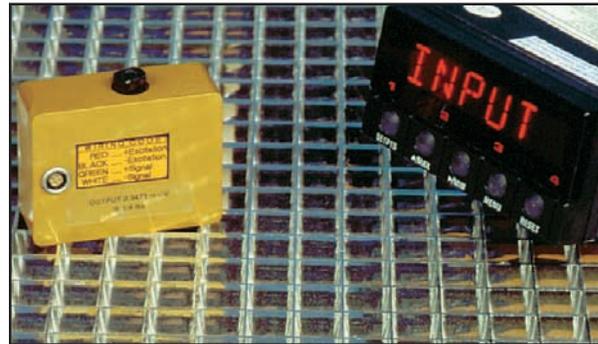

## SPECIFICATIONS

LOAD RANGES:	.25 lb to 100 lb
LINEARITY:	±0.05%
HYSTERESIS:	±0.05%
REPEATABILITY:	±0.05%
MATERIAL:	Aluminum
TEMPERATURE RANGE:	60° to 160° F
OUTPUT:	2 mv/v
BRIDGE RESISTANCE:	1000 ohm
EXCITATION:	18Vdc Max
SAFE OVERLOAD:	150% of capacity
CABLE:	Connector & cable assembly optional - 10 Ft standard

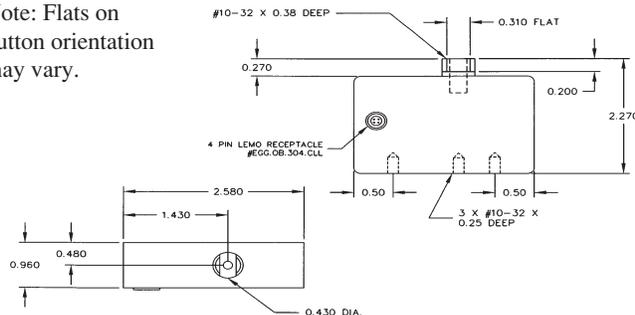

## AVAILABLE RANGES

.25, .5, 1, 2.2, 5, 10, 25, 50, 100 lbs.

10 gram range unit available, consult Cooper for specifications.

Note: Flats on button orientation may vary.

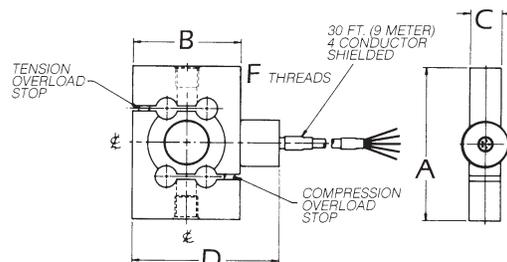

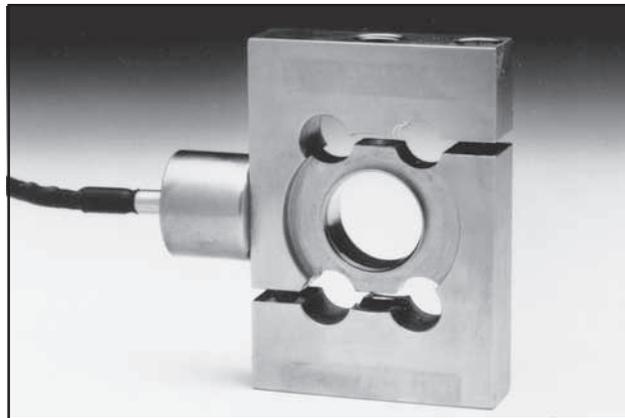

# LFS 250 - HERMETICALLY SEALED S-BEAM

The LFS 250 is a dual cantilevered, hermetically sealed, stainless steel beam load cell. This cell is designed for both tension and compression and harsh environments, where other cells will not work. It is capable of withstanding significant side-load without physical damage. The LFS 250 uses proven sealing techniques that provide superior waterproofing and combines welded metal seals and a water block cable entry system which will resist leakage.

2.3 kgf to 225T Capacities

### LSHD Series Compression

Standard

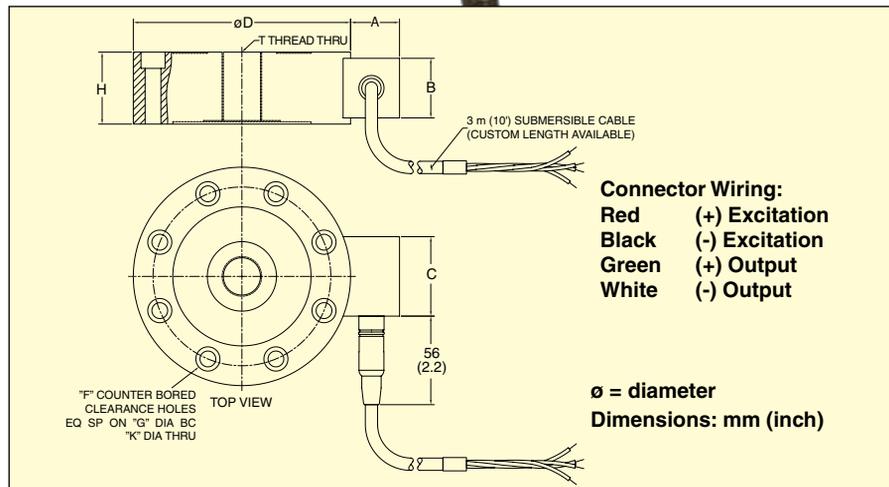

- ✓ High Accuracy
- ✓ 5-Point NIST Traceable Calibration Included
- ✓ Hermetically Sealed for Wet and Submerged Applications
- ✓ All Stainless Steel Construction for Harsh Industrial Environments
- ✓ 1% Interchangeability for Scale Applications
- ✓ High Capability to Resist Side Loads
- ✓ Low Profile for Easy Installations
- ✓ 3 m (10') Waterproof Cable Standard

The LSHD Series load cells are hermetically sealed and have a high pressure, high temperature molded cable seal to assure long life in wet or submerged applications such as truck or rail scales. They are supplied with a standard length of 3 m (10') of cable, however longer lengths are available. Many standard lengths are stocked plus custom lengths are also available.

LSHD

Waterproof high pressure molded cable connection.

*Comes complete with 5-point NIST traceable calibration certificate, 59K shunt data, and 3 m (10') cable.*

**Note:** Ranges over 300,000 lb are calibrated at 300,000 lb.

**Ordering Examples:** LSHD-500 is a 500 lb range waterproof load cell.

LSHD-20K, 20,000 lb range waterproof load cell.

# Model 265

## Very Low Differential Pressure Transducer

Setra's Model 265 is a lower price solution that offers an excellent price to performance ratio and meets the requirements in all typical HVAC applications. The 265 is a low differential pressure transducer that uses a dead-ended capacitive sensing element that requires minimal amplification and delivers excellent accuracy and longterm stability. It delivers  $\pm 0.25\%$ ,  $\pm 0.4\%$  and  $\pm 1\%$  FS accuracy options with pressure ranges from 0.25" W.C. up to 100" W.C. The 265 has a small footprint, an AC power option and an optional conduit cover that allows for simple, secure installation for any applications.

### The Best Price to Performance in the Industry

The 265 delivers exceptional features at a low price, perfect for any OEM looking for quality and performance at an affordable price.

### Quick & Easy Installation

The 265 is designed to reduce installation costs while increasing overall operating efficiency. Installation is easy with integral mounting tabs, pressure connections located on the face of the unit, and a screw terminal strip for electrical termination.

### The Setra Sensor

The core technology of the 265 is the all stainless steel capacitive sensing element. Setra designs and manufactures all of their sensing elements resulting in full control over the process and quality of every single sensor. The welded dead-ended capacitive sensors requires minimal amplification and delivers excellent accuracy and longterm stability. Setra's technology has been used in over 8 million installations and has the highest field acceptance rate in the industry.

- $\pm 0.25\%$ ,  $\pm 0.5\%$ ,  $\pm 1\%$  FS Accuracy
- Excellent Price to Performance Ratio
- Reduce Installation Costs

### Model 265 Features:

- Up to 10 PSI Overpressure
- 24 VDC or 24 VAC Excitation
- Voltage or Analog Outputs
- Reverse Wiring Protection
- Internal Regulation
- Fire Retardant Case (UL 94 V-0 Approved)
- Meets CE Conformance Standards

### Applications:

- HVAC Systems
- Energy Management Systems
- Variable Air Volume and Fan Control (VAV)
- Environmental Pollution Control
- Static Duct and Cleanroom Pressures

### ORDERING INFORMATION

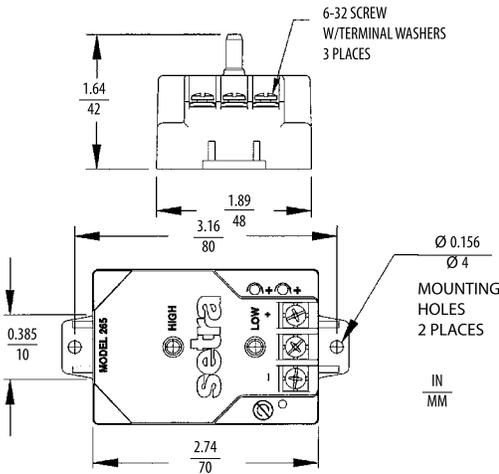

2	6	5	1	-											
Model	Range Code				Excitation/Output				Electrical Termination		Accuracy				
2651 = Model 265	Unidirectional		Bidirectional		11	24VDC/ 4-20 mA			T1	Terminal Strip	C	±1% FS			
	R25WD	0 to 0.25"W.C.	0R1WB	±0.1"W.C.	2B	24VDC/ 0-5 VDC			A1	1/2" Conduit Enc.	E	±0.4% FS			
	0R5WD	0 to 0.5"W.C.	R25WB	±0.25"W.C.	AB	24VAC/ 0-5 VDC					F	±0.25% FS			
	001WD	0 to 1"W.C.	0R5WB	±0.5"W.C.	AC	24VAC/ 0-10 VDC					G	±1% FS			
	2R5WD	0 to 2.5"W.C.	001WB	±1"W.C.											
	050WD	0 to 5"W.C.	2R5WB	±2.5"W.C.											
	010WD	0 to 10"W.C.	005WB	±5"W.C.											
	025WD	0 to 25"W.C.	010WB	±10"W.C.											
	050WD	0 to 50"W.C.	025WB	±25"W.C.											
	100WD	0 to 100"W.C.	050WB	±50"W.C.											

Ordering Example: 26512R5WD11T1C = Model 265, 0 to 25 in. WC Range, 4 to 20 mA Output, Terminal Strip Electrical Connection, ±1% Accuracy.

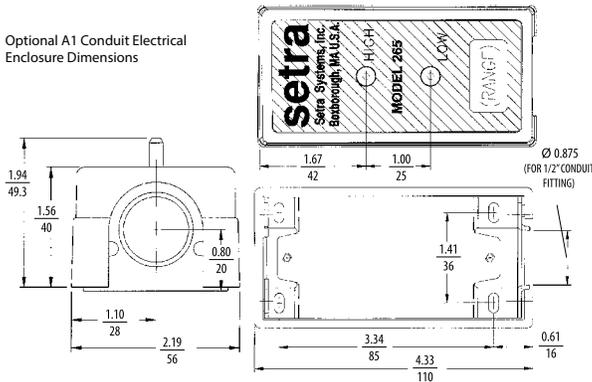

Please contact factory for versions not shown.

### DIMENSIONS

Code T1 Electrical Termination Dimensions

Optional A1 Conduit Electrical Enclosure Dimensions

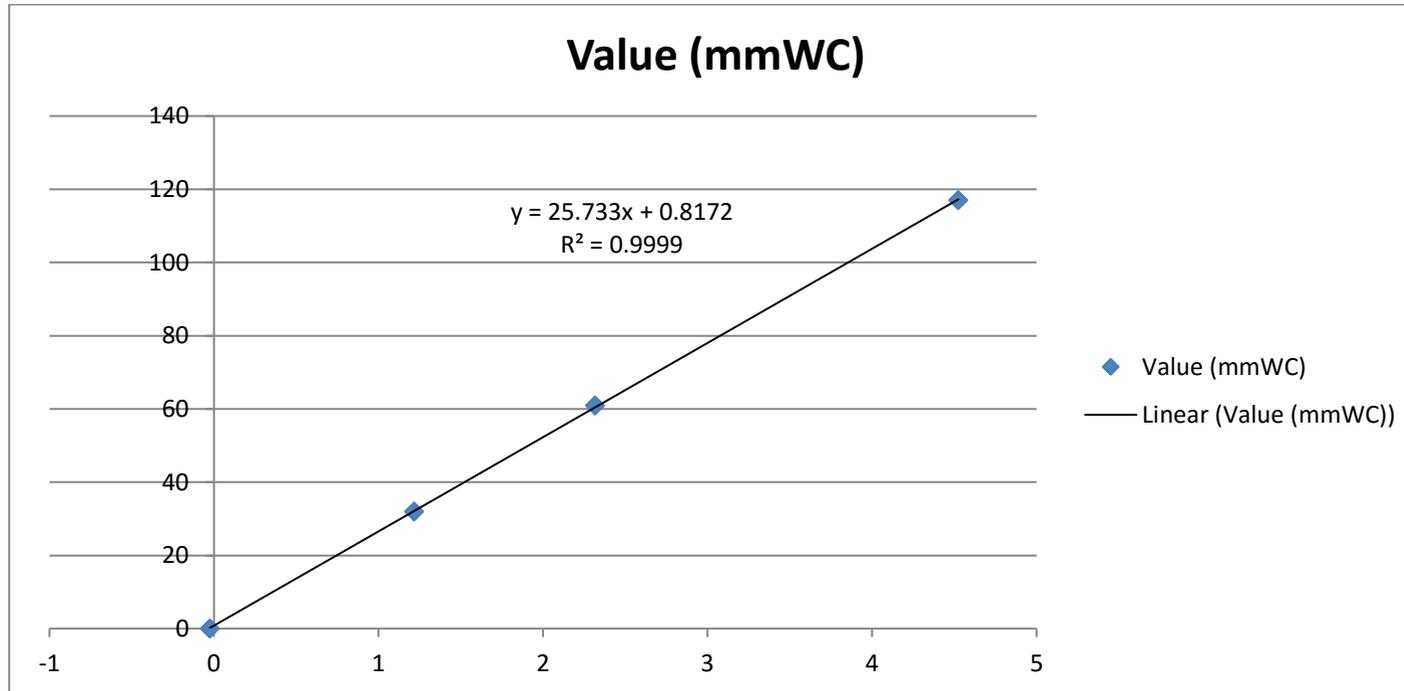

### GENERAL SPECIFICATIONS

Performance Data			Physical Description		
	Standard	Optional		Pressure Fittings	1/4" Fitting
Accuracy RSS <sup>1</sup> (at constant temp)	±1.0% FS	±0.4% FS	±0.22% FS	Case	Fire Retardant Glass Filled Polyester (UL 94-V Approved)
Non-Linearity, BFSL	±0.98% FS	±0.38% FS	±0.22% FS	Weight	3 oz
Hysteresis	0.10% FS	0.10% FS	0.10% FS	Elec. Connection	Screw Terminal Strip
Non-Repeatability	0.05% FS	0.05% FS	0.05% FS	Position Effect <sup>4</sup>	
Thermal Effects <sup>2</sup>				Range	Zero Offset (%FS/G)
Compensated Range °F (°C)	0 to +150 (-18 to +65)			To 0.5"W.C.	0.60
Zero Shift %FS/100°F(50°C)	±0.033 (±0.06)			To 1.0"W.C.	0.50
Span Shift %FS/100°F(50°C)	±0.033 (±0.06)			To 2.5"W.C.	0.22
Max. Line Pressure	10 PSI			To 5.0"W.C.	0.14
Overpressure	Up to 10 PSI (range dependent)			<b>Electrical Data (Voltage)</b>	
Long Term Stability	0.5% FS/YR			Circuit	3-Wire (Com, Out, Exc)
Warm-Up Shift	±0.1% FS Total			Excitation/Output <sup>5</sup>	9 to 30 VDC / 0 to 5 VDC <sup>6</sup> 9 to 30 VAC / 0 to 5 VDC 12 to 30 VAC / 0 to 10 VDC <sup>6</sup>
<b>Pressure Media</b>				Output Impedance	<100 ohms
Typically air or similar non-conducting gases.				Bidirectional output at zero pressure	2.5 VDC (±50 mV)
<b>Environmental Data</b>			<b>Electrical Data (Current)</b>		
Temperature				Circuit	2-Wire
Operating °F (°C) <sup>3</sup>	0 to +150 (-18 to +65)			Output <sup>7</sup>	4 to 20 mA <sup>3</sup>
Storage °F (°C)	-40 to +185 (-40 to +85)			External Load	0 to 800 ohms
<sup>1</sup> RSS of Non-Linearity, Non-Repeatability and Hysteresis				Min. Loop Supply Voltage (VDC)	9 + 0.02 x (resistance of receiver plus line)
<sup>2</sup> Units calibrated at nominal 70°F. Maximum thermal error computed from this datum.				Max. Loop Supply Voltage (VDC)	30 + 0.004 x (resistance of receiver plus line)
<sup>3</sup> Operating temperature of the electronics only. Pressure media temperatures may be considerably higher or lower.				Bidirectional output at zero pressure	12 mA
<sup>4</sup> Unit is factory calibrated at 0g effect of vertical position.					
<sup>5</sup> Calibrated into 50k ohm load. Operable into 5000 ohms or greater.					
<sup>6</sup> Zero & Span (FS) output factory set to within ±50mV (±25 mV for optional accuracies).					
<sup>7</sup> Calibrated at factory with a 24 VDC loop supply voltage and a 250 ohm load.					
<sup>8</sup> Zero & Span (FS) output factory set to within ±0.16 mA (±0.08 mA for optional accuracies.).					

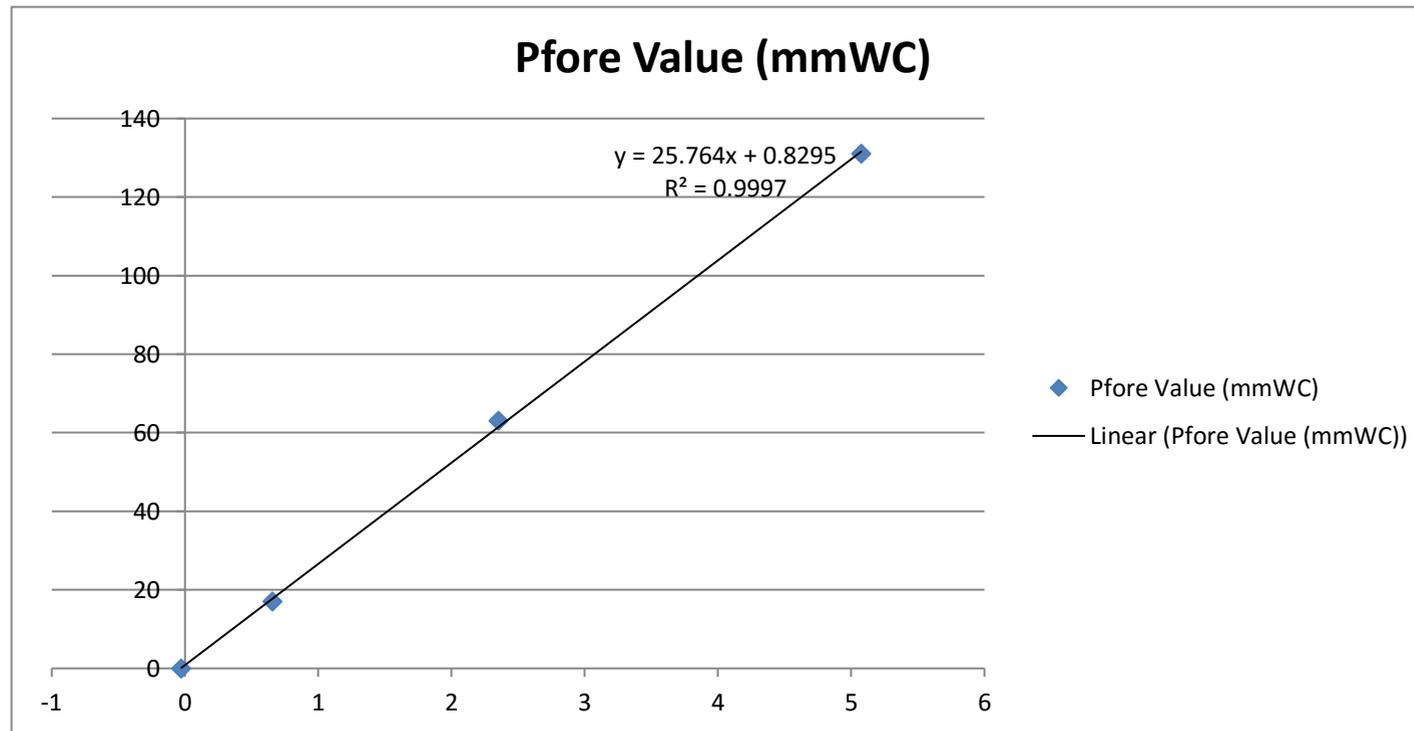

NOTE: Setra quality standards are based on ANSI-Z540-1. The calibration of this product is NIST traceable.
